ACKNOWLEDGEMENTS

We would like to express our deepest gratitude to our tutor Yalile Jiménez Olivares for her excellent guidance, and patience through this challenging trail. We are thankful for her commitment during this research project because she devoted a lot of her valuable time to aid us, and without her help, it would not have been possible. Her contribution was a light of knowledge for us. There is no doubt that her knowledge, support and understanding guided us to follow the stepping-stones to reach the last stage. We would like to thank those that were part of our accomplishment.
I would like to thank those who unconditionally trusted and supported me during this journey:

- God who heard my prayers and gave me everything I needed to fulfill this goal.
- my father who is my angel, and I am certain that in heaven he is proud of his girl.
- my fiancé who patiently witnessed days and nights of hard work. He encouraged me to never give up and to trust in God’s time.
- my friend and partner Evelyn for her commitment, courage, patience, and unconditional effort until the last day. You are the best!
- our tutoring professor Yalile for her time, guidance, support, and reliance on us and our project. Her encouraging words and personality inspired us and gave us the strength to fulfill our objectives.
- Dra. Priscilla Barrientos Paz, coordinator of the Gerontology Program at UNED for her trust and support to carry out this research.
- my senior students of the Gerontology Program at UNED for their valuable and generous contribution to our research project. This would not have been possible without their willingness to help.
- Noelia Jiménez Valverde and Sofia Mora Abarca for checking our project and giving us feedback to improve.
- Paul Gutierrez and Mauricio Espinoza for helping us to keep the objectiveness in our project, and Austin Vander Wel for offering his support, time, and voice to record the class audio.
- all the professors at Universidad Nacional who showed interest in our research and offered their help and support.

Verónica Brenes Sánchez
I would like to extend my heartfelt gratitude to those who have helped me in this process:

- our tutor Yalile Jiménez Olivares, for her vital feedback and encouragement. I am extremely thankful and indebted to her for sharing her expertise, and sincere and valuable guidance.
- Dr. Priscilla Barrientos Paz, coordinator of the Gerontology Program at UNED, for letting us carried out this research in her program.
- Noelia Jiménez Valverde and Sofia Mora Abarca who patiently checked our writing piece and eagerly provided worthy comments to improve our research.
- my entire gratitude to all the students who took part in this research because this product is due to their participation and willingness to continue learning.
- my dear friend Verónica for sharing these moments, working with me and for being patient. Thank you!
- Mauricio Espinoza and Paul Gutierrez for their contribution and time.
- Austin Vander Wel for his disposition to help us to record the class audio.
- my sisters and my brother for the help and inspiration they extended.
- most especially to my parents for their support, motivation and understanding.
- and God, who is always guiding us and made all things possible.

Evelyn Gabriela Valverde Marín

ABSTRACT

This research project is aimed at exploring to which extent Interary ECPA (Interactive-Literary English Consonant Pronunciation Activities) improved the pronunciation comprehensibility of older learners. The study was carried out with a group of students from the Gerontology Program at Universidad Estatal a Distancia (UNED) whose ages ranged from 55 to 78 years old. The significance of the study lies in the fact that pronunciation instruction is not included in the course program, and this micro-skill is of high importance in order to achieve an effective and comprehensible communication in the target language. Equally important, older learners need a specific methodology that embraces their own needs and skills. Based on the elderly’s capacities, Interary ECPA was designed and administered to a group of senior citizens attending English classes at the Gerontology Program. At the end of the study, it was concluded that older learners can improve their performance in the target language by enhancing their comprehensible pronunciation.

Keywords: Geragogy, Andragogy, Geriatrics, senior citizen, pronunciation, comprehensibility
The world is becoming globalized, and communication among peoples and cultures has become essential in this era. Consequently, the ability to speak one or more languages opens communication doors in the changing multicultural environment people are involved in. In Costa Rica, learning English has become one trend that is expected to help people fit in a dynamic and challenging society which craves for a cross-cultural communication that breaks language barriers. To illustrate, there are several educational institutions that encourage the population to take English classes since early stages of life. According to Instituto Nacional de Aprendizaje (INA) and Consejo Nacional de Rectores (CONARE), 13,000 people graduated from English courses in 2010 (as cited in Departamento de Investigacion Coalicion Costarricence de Iniciativas de Desarrollo (CINDE), 2012, para. 10). Additionally, in Brunca Region, specifically in Pérez Zeledón, more than 290 people were taking English classes at Centro de Idiomas Universidad Nacional (CIUNA) during 2014 (Jiménez, personal communication, November 3, 2014). Due to this foreign language learning phenomenon, older people have started to take part in this modern society by participating in different programs that offer them the opportunity not only to be foreign language speakers but also to make use of time in a creative form.

In addition to sharing the desire for communication in the foreign language, this population looks for the opportunity to socialize and be active again; this because they are seen as unproductive people who often feel lonely and depressed (Katchana, 2013, p. 895). Nevertheless, once they have decided to enroll in a language program, different generalizations are made around the capability of the elderly to learn a foreign language. On this topic Stevens (2003) mentioned the following:
American culture is of two minds when it comes to thinking about the intellectual capacity of seniors. On the one hand, the belief is that as we age, we do not have as great a capacity to learn new things. Folk wisdom asserts that ‘you can’t teach an old dog new tricks.’ On the other hand, many colleges have established educational programs for older adults, and mandatory retirement has been outlawed in numerous places. (p. 1)

As a result, senior citizens as well as younger learners are involved in a series of questions regarding their language learning process. Are they going to be able to speak fluently? Could they remember the different features of the target language? Do they learn in the same way than teenagers or adults do? What are the main obstacles for senior citizens to learn a language? Could they achieve accuracy in the pronunciation of the target language? These inquiries motivated the formulation of this study.

Chapter one presents an overview of the research project by introducing the background and purpose of the study, the significance of the study, and the limitations and delimitations of the study.

**Background to the Study**

Foreign language learning has been a subject of research for decades. Every day, researchers, theorists, and teachers analyze data garnered from the classroom providing significant contributions to the subject being investigated. Several studies have been carried out with children, teenagers and adults, but few have been developed with a population older than 60. For this reason, textbooks or resources used to teach the target language follow methodologies based on young learners’ capacities and preferences setting apart old learners’ experiences and needs. By way of illustration, a study carried out by Katachana (2013) in Greece, demonstrates the lack of contextualization of programs to teach the elderly. In her
study, she designed a specific course for senior citizens since most of the courses prepare young learners to pass the ESOL exam (English for Speakers of Other Languages). Another study was done in Costa Rica by Durán in 2012. Durán admitted that her study was the first research in Costa Rica addressed to understand the physiological and cognitive changes in senior citizens. The results garnered provided information that benefits teachers who want to develop courses for the elderly. As a result, it is necessary to continue examining reports on the old person to discover the extent to which senior citizens’ learning has been studied.

There are other studies that involve motivation, age-related changes, methodologies, the teaching of pronunciation and the fields of andragogy or pedagogy. For instance, Dörr (2006) proposed methodologies to teach the elderly and explained the changes old people suffer due to age. Moreover, Yates and Zielinski (2009) wrote the book *Give it a go: Teaching pronunciation to adults* which portrays the differences between adult learners with different backgrounds in the Adult Migrant English Program (AMEP) in Australia. Although this book contains relevant theory, it only takes into account adults but not the elderly. In addition, Schaetzel and Ling (2009) did a research on the factors affecting the adults’ learning of pronunciation in an ESL (English as a Second Language) context. It is equally important to state that Foote, Holtby, and Derwing (2010) studied how the teaching of pronunciation in Adult ESL Programs in Canada has changed through time. The significance to implement courses that fit the adults’ needs has been widely recognized. Even though there is a wide range of studies on this micro-skill, there is still a need to continue exploring the learning processes in the elderly.

On the other hand, there are several studies on the difference between Andragogical and Pedagogical orientations. To begin with, Deveci (2007) analyzed such orientations that Turkish adult EFL learners had, and he discovered that learners and teachers could exhibit
both. Knowles (as cited in Deveci, 2007) defined Andragogy as “the art and science of helping adults learn” (p. 16). Following that, Henschke (2009), talked about the difference between Andragogy and Pedagogy. He also demonstrated that the former could be adapted to different settings, and that teachers must use memorable activities to help adults reach learning. To sum up, the literature analyzed explains that the changes on age forces language instructors to modify the course programs so that the objectives fit the learners’ necessities.

**Purpose of the Study**

Foreign language learners may face difficulties in learning English consonant sounds due to differences between this and their mother tongue (Spanish). For instance, the sounds /ð/, /θ/, /ʒ/, and /dʒ/ belong to English, but they are not found in the Spanish phonological system. Besides the aforementioned phoneme differences, age affects the learning process since the critical period in which learners acquire the language naturally and effortlessly ends at puberty (Abello-Contesee, 2008, p. 170). Consequently, following the critical period principle, it could be argued that adults may face more difficulties internalizing the sounds of the target tongue than younger learners since their native accent, stress, intonation, and rhythm are more rooted. Nevertheless, with the appropriate methodology older learners are capable of being successful in the foreign language process.

In the past years different institutions have been developing English courses for senior citizens. Two of these organizations committed to the immersion of the elderly in a continuous learning process are Universidad de Costa Rica and Universidad Estatal a Distancia with their projects Programa Integral de la Persona Adulta Mayor (PIAM) and Programa de Gerontología respectively. The Gerontology Program from UNED, for example, offers senior citizens English courses based on their own pace and needs. The main objectives in such
courses lie on oral communication integrating the skills of listening, reading, writing, vocabulary, and the grammar micro-skill. However, pronunciation is not considered in the course syllabus. For this reason, research is required on the teaching of pronunciation to the elderly to strengthen the methodologies and materials used. As a result, the purpose of this quantitative study is to determine if Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) improves the comprehensibility in the pronunciation of a group of elderly people taking the intermediate English course from the Gerontology Program at UNED, Pérez Zeledón.

Objectives of the Project

General Objective:

To determine to which extent Interary ECPA (Interactive-literary English Consonant Pronunciation Activities) enhances the comprehensibility of senior citizens’ English consonant pronunciation in group Two of the intermediate level from the Gerontology Program at UNED, Pérez Zeledón.

Specific Objectives:

✓ To revise literature about the foreign language learning and teaching processes in the elderly when internalizing the consonant sounds of the target language.

✓ To design a booklet containing the Interary ECPA.

✓ To implement the Interary ECPA to a group of senior citizens from the Gerontology Program.

✓ To establish the effectiveness of the Interary ECPA implemented in the group of learners.

Significance of the Study
Some years ago the role of senior citizens in society was passive, but nowadays they take part in different activities that promote an active lifestyle. In the past, the elderly were in charge of household chores, and they stayed in their houses (Bustos, Padilla, Pernudi, Sandoval, & Solórzano, 2005, p. 3), but organizations such as CONAPAM (Consejo Nacional de la Persona Adulta Mayor) and the public universities in Costa Rica are concerned about the insertion of this population in active and dynamic leisure activities, especially since the percentage of people aged 60 is increasing every year. The United Nations projected that by the year 2050 one person out of every five will be a senior citizen (Dörr, 2006, p. 6), and Costa Rica is not the exception. According to the Instituto Nacional de Estadística y Censo (INEC) (2013), the number of people older than 60 is 536 440, and it is growing considerably (p. 66). Therefore, under this demographic increase in the elderly population, Universidad Estatal a Distancia (UNED) has developed educational programs where the retirees-to-be and retired people may be involved in a continuous learning stage eradicating the aforementioned stereotypes.

All the previously mentioned changes in society have been the result of collective effort reinforced by the United Nations, which in 1982 decided to call countries together on a World Assembly to discuss issues on aging and design the Viena International Plan of Action on aging in which the elderly’s social and economic security were guaranteed. Viena’s Plan (1983) stated that:

As a basic human right, education must be made available without discrimination against the elderly. Educational policies should reflect the principle of the right to education of the aging, through the appropriate allocation of resources and in suitable education programmes. Care should be taken to adapt educational methods to the capacities of the elderly, so that they may participate equitably in and profit from any
education provided. The need for continuing adult education at all levels should be recognized and encouraged. (p. 38)

For the purpose of granting the basic human right to continuous education, governmental and non-governmental organizations have been working through the years to involve the elderly in programs that contribute not only to their return to education, but also to the immersion in recreational activities such as learning a new language.

Older learners may be subjects of social generalizations such as being quiet and static, but the age does not prevent them from being productive or capable of learning. As Dörr (2006) stated, “Younger and older persons do not differ in their ability to learn new things, but older adults exhibit slower performance of learned responses” (p. 13). In this way the elderly may be proficient in learning a foreign language; with the difference that they may be slower processing and internalizing information. Interestingly, when learning a language older learners advantage younger learners since they have different sources of motivation. In the case of young people, they learn a second language because it is a requirement for their jobs; contrary to older learners who want to speak other languages as a way to be active and immersed in a dynamic society. Dörr (2006) found that most senior citizens possess integrative motivation which she defined as “wanting to learn a second language in order to identify oneself with the community that speaks the language” (p. 22). As a consequence, not only do older learners have the ability to learn new information, but also they hold de motivation that encourages them to pursue the goal of learning new subjects and skills.

On behalf of the immersion of the elderly in the process of continuous learning, The Gerontology Program from UNED offers a variety of courses, including English, which are based on senior citizens’ learning pace and special needs. For instance, this population requires adapted resources that suit their necessities as age declines vision and hearing.
INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

abilities. Dörr (2006) also added that “Learning by integrating practical aspects of life experience is of high importance for the target group 50+. Examples, theoretical inputs and explanations should represent and match life and workplace experiences of the participants” (p. 34). This means that older learners require a special methodology which embraces their own abilities and needs without leaving aside the educational trends encompassed by most language institutions such the Communicative Approach and the Task Based Approach, among others. English courses at the Gerontology Program offer a specific curriculum for this population (50+); however, pronunciation is not considered in the course programs. With this in mind, Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) have been designed to improve the comprehensibility in the consonant pronunciation of a group of elderly taking the intermediate English course from the Gerontology Program at UNED, Pérez Zeledón.

This methodology aspires to providing teachers with a tool to incorporate pronunciation in the classroom. Additionally, this research is aimed at offering a stepping-stone for other researchers to continue exploring the learning process of the elderly’s English consonant pronunciation comprehensibility. The study may also have significance for researchers and teachers since the elderly population is increasing every year. This means that in the following twenty five years Costa Rica and many other countries will be populated majorly by senior citizens living a more globalized era, and they will need to be involved in effective educational programs that embrace their necessities.

Assumptions

Prior to the study different assumptions were made. First, the group of students under study volunteered to take part in this research, and they could withdraw at any time with no
ramifications in their regular course. The researchers also believed that the participants would answer the questionnaire, and that they would answer it truthfully. In addition, the pre-test and post-test were expected to be administered and measured under the same conditions.

**Limitations**

The following constraints were some of the elements that obstructed the smoothness of the research project. First, the number of students involved in the research was considerably small, and the researchers’ main concern was the desertion factor. However, none of the students dropped out. Second, the time devoted to teaching pronunciation was affected by extracurricular activities such as conferences given by the program developers. The researchers’ action plan regarding this issue was to reschedule the missing classes. Third, the improvement in the comprehensibility in the pronunciation of English consonant sounds required independent study hours, but the researchers could not prove if students dedicated time to review and practice at home. Fourth, some students did not attend classes because of personal issues and health problems. On this matter, the researchers provided students with the material beforehand so that they could listen and practice in their houses. Fifth, in regard to the topic of investigation, not plentiful sources were found on the teaching/learning processes of English as a foreign language for the elderly in Costa Rica, and few about teaching/learning pronunciation to senior citizens were located. For this reason, the researchers adopted, adapted and created their own materials and methodologies to improve the comprehensibility of the elderly’s English consonant pronunciation.

**Delimitations**

For the purpose of this research, Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) were administered to a group of eight senior learners from the
Gerontology Program at Universidad Estatal a Distancia (UNED) in Pérez Zeledón. Each class developing the design (Interary ECPA) took one hour from the regular English class. Additionally, this study was delimited to the teaching of consonants only. The results of this study may be replicable only with a population under the same conditions. That is literate retirees-to-be (50+) and retired people studying English as a foreign language.

**Definitions**

The following terms are defined to clarify their meaning and use in the study.

- **Aging:** According to the National Institute of Aging, this concept refers to “all the changes that occur over the course of life. You grow. You develop. You reach maturity” (U.S. Department of Health and Human Services, para. 1, 2012). In other words, aging is the genetic process that every living being, including humans, undergoes. From conception to death, people age; and through the years, changes in the body are faced. Such changes are noticeable in all the stages of life: childhood, adolescence, adulthood, and the old age; when physical changes such as grey hair and wrinkles appear.

- **Andragogy:** This term was popularized by the educator Michael Knowles, who stated that adults learn different from children. Accordingly, “Andragogy assumes that adults already have a significant amount of knowledge, are capable of making 'educated' choices in their learning experiences and learn best when 'the teacher' or facilitator uses a combination of teaching styles, some of which may be 'pedagogical' in nature” Goodmurphy, et al (2000, p. 2). In this way, Andragogy refers to the art of teaching the older learners.
Comprehensibility: Derwing, Munro, and Thomson (2006) defined comprehensibility as “the ease or difficulty with which a listener understands L2 accented speech” (p. 360). To understand accented speech, language features such as pronunciation should be enhanced. To such degree, comprehensible input and output will result in effective communication.

Cricoarytenoid joint: It is defined as “the joint between the cricoid and arytenoid cartilages in the back wall of the larynx. The Cricoarytenoid joints are rotated by the vibration of vocal cords, thus changing the tone of voice” (Kamanli, Gok, Sanhin, Kaygusuz & Yalcin, 2001, p. 593). If the cricoarytenoid joint decays with time, the voicing feature that characterizes the sounds could be modified.

Critical period hypothesis: This term means that there is “an optimal period for language acquisition, ending at puberty” (Abello-Contesse, 2009, p.170). This means that the appropriate age to acquire a language is before puberty. Acquiring a language during the Critical Period allows the person, exposed to the language, to become a native-like speaker of the target language.

Geragogy: This approach “emphasizes the guided learning of older adults and considers their special needs” (Socrates Grundtvig Organization, n.d., para. 6) Therefore, Geragogy focuses on the elderly’s learning processes and provides the steps for the teaching of old adults.

Gerontology: The Merriam Webster dictionary defines Gerontology as “the scientific study of old age and the processes of becoming old. Gerontology in this study refers to the process of aging since the moment of fertilization to death.

Pedagogy: Oxford Dictionaries define Pedagogy as “The method and practice of teaching, especially as an academic subject or theoretical concept:
the relationship between applied linguistics and language pedagogy.” Nonetheless, Goodmurphy, Branton, Callens, and Gedies (2000) agreed with Michael Knowles by stating that *Pedagogy* “is intended to refer to teaching children or using a style of teaching that is typically related to teaching children (teacher centered). It refers to children and the notion of ’filling their heads while they move towards maturity’” (p. 2). As a result, *Pedagogy* is the approach or methodology to teach children.

❖ Presbycusis: According to McCarthy (2011) presbycusis “is gradual hearing loss in both ears that commonly occurs as people age” (p. 1). Most of the people suffer from presbycusis as they grow old.

❖ Presbyopia: It “is the age-related decline in the ability to see close objects clearly” (Dörr, 2006, p. 12). This common visual problem affects the elderly when trying to read or observe objects.

❖ Senior citizens: According to the World Health Organization, “Most developed world countries have accepted the chronological age of 65 years as a definition of ’elderly' or older person…” [However], “at the moment, there is no United Nations standard numerical criterion, but the UN agreed cutoff is 60+ years to refer to the older population. As a result, the elderly refers to people older than 60.

❖ The old age: “Old age, also called senescence, in human beings, [is] the final stage of the normal life span” (Encyclopædia Britannica, Inn, 2015). The old age is usually typified by physical changes in the hair and skin. Nonetheless, changes in the old age involve more than such alterations. Encyclopædia Britannica adds that the old age concerns “standpoints of biology, demography (conditions of mortality and morbidity), employment and retirement, and sociology”... [And,] …“for statistical and public
INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

administrative purposes, old age is frequently defined as 60 or 65 years of age or older” (para, 1, 2015).

❖ Working memory: It “is the capacity of the mind at any given moment to manipulate different types of information” (Stevens, 2003, p.2). As an illustration, the working memory manages the information taking place in the present time. The working memory gives the user the possibility to do different tasks at the same time and remember the purpose of each task.

To understand how the elderly process information related to a target language, it is necessary to revise recent studies on this field. However, most of the research carried out on the acquisition of English consonant sounds involve children, teenagers or adults but not old people. It is claimed by some researchers such as Krashen (1986), Goodwin (1996), and Nunan (2003) that the mother tongue, the second language, the age, and the teaching methodology influence positively or negatively how people learn a foreign language. Theories, concepts, and investigations governing second language learning and acquisition are fundamental to build new hypotheses on this new framework of the senior citizens age.
The purpose of this study is to investigate to which extent Interary ECPA (Interactive-literary English Consonant Pronunciation Activities) improves the comprehensibility of older learners’ English consonant pronunciation in group Two of the intermediate from the Gerontology Program at UNED, Pérez Zeledón. This literature review examines relevant theories, concepts, and methods that must be considered regarding teaching the elderly and teaching pronunciation to this age group. Among the topics pointed out are gerontology, andragogy and pedagogy, geragogy, the teaching of pronunciation, the Critical Period Hypothesis, the Input Hypothesis, student’s motivation, the role of age in mental processes, the influence of an EFL (English as a Foreign Language) setting on pronunciation, and pronunciation techniques for the elderly.

**Gerontology: Defining Aging Processes**

Every human being starts aging since the conception until death. Hidalgo (2002) explained that this process of becoming old is known as aging. In this form, becoming old is a natural process every person undergoes, and it does not exactly mean having wrinkles and grey hair. On the other hand, the stage of life in which such physical changes are accentuated is known as the old age (p. 29). Alpizar (2007) also added that as time goes by and people age, different changes are faced. Such changes affect physical ability, personality, social roles, and the capacity to adjust and adapt oneself to the environment (para. 2). The science that studies the changes in both the old age and aging is known as Gerontology, and the Merriam-Webster dictionary defines Gerontology as “the comprehensive study of aging and the problems of the aged.” With this in mind, the School of Gerontology (2015) explained that “Many people
confuse Gerontology with Geriatrics. Whereas Geriatrics focuses strictly on the medical
conditions and disease of the aging, Gerontology is a multidisciplinary study that incorporates
biology, psychology and sociology” (para. 1). Henceforth, it needs to be understood that aging
as a natural phenomenon is inevitable, and the alterations experienced during life make society
adapt the environment to satisfy special needs typical of each age group.

Andragogy: Teaching Adults

Many definitions may be found on the concept of learning. Herod (2012), for example,
stated that “Learning is the cognitive/physical/affective acquisition and processing of
skills/knowledge to varying depths, (where 'depth' refers to one’s understanding of, ability to
manipulate, apply, and/or communicate the skill/knowledge)” (p. 6). Therefore, it could be
argued that learning may vary depending on students’ age, among other aspects. Based on the
age issue, different concepts have been given to the educational process people undergo in
their lives. Pedagogy and Andragogy are among these terms. In the 70s, the professor Malcom
Knowles popularized the term Andragogy stating that adults learned differently from children.
He used such term for the processes undergone in adult learning, leaving the term Pedagogy to
the learning process of children. Knowles (as cited in Herod, 2012), mentioned that older
learners are independent and self-directed, opposed to younger learners who are dependent. He
also stated that older learners are intrinsically motivated while younger learners receive
motivation from external sources. The learning environment may change as well. In an adult
learning classroom the environment is more informal and characterized by cooperation and
respect; contrary to the one found among younger learners, in which students show more
competitiveness and judgment values (p. 7). Accordingly, senior students are involved in a
different learning context, and this context may also vary as students continue aging.
**Geragogy: Teaching the Elderly**

In an attempt to understand different processes during aging including teaching and learning, the term *Geragogy* has emerged in the last years. Socrates Grundtvig, an organization which develops teaching and training materials for adult’s education in Europe, defined *Geragogy* as “the preparation to aging” (para. 7). Therefore, *Geragogy* prepares people during this stage so that they have a proper quality of life. Granted this, a teaching methodology is among the features that have to be adjusted considering old learners’ needs. In this regard, Socrates Grundtvig added that “The innovation and strength features of this concept consist in adapting education processes to senior people, especially in supplying cognitive tools in order to face the changes, the uneasiness and the difficulties through the various steps of life’s evolution” (para. 7). Researchers at the aforementioned organization expect to provide such an approach based on the elderly’s skills and requirements. They explained that “The older adult population--for example--has a lower level of formal education than the rest of the population, is composed largely of females, has changing social interaction patterns, and suffers from a number of health problems. To meet these needs, the *Geragogy* approach would stress instructor-directed learning, supervised decision-making, and person-centred activities” (para. 10). Accordingly, older learners require a special methodology that embraces their own abilities, and the *Geragogy* approach may be considered when teaching a language.

**Teaching English as a Foreign Language to Senior Citizens**
When teaching old people, language instructors must attain certain aspects regarding the elderly’s cognitive processes. Walsh and Diller (as cited in Durán, 2012) stated that “older learners have more highly developed cognitive systems, they are able to make higher associations and generalizations, and can integrate the language input with their already substantial learning experience” (p. 28). To this matter, Krashen and Scarcella (as cited in Durán, 2012) sustained that “there is not any loss of language ability or language learning capability over time, age is not a detriment to learn, and by all accounts, learning a second (or third, etc.) language actually keeps older learners’ minds active” (p. 29). As a result, language instructors must consider all these advantages of teaching senior learners, and implement techniques that adjust their learning profile. Dörr (2006) stated that “language teaching should be attached to past experiences of life and occupation of the senior learners, since age-appropriate didactic and methodology especially focuses on associations by linking new knowledge to old knowledge” (p. 34). Subsequently, by using the appropriate methodologies, the elderly could become successful in learning a foreign language eradicating some misconceptions found in society about the elderly’s capabilities.

**Stereotypes of the Elderly as Foreign Language Learners**

The elderly may face a series of stereotypes when learning a new language; perhaps because most language courses are attended by younger learners. Society itself, including the old age, has been in charge of providing characteristics such as “handicapped” that are no longer applicable for this population. As Dörr (2006) stated:

One of the first challenges for senior citizens is to develop a more positive image of aging itself in order to start with a learning activity as could be attending a second language course. This is the prerequisite for starting a language learning activity: aging
is not a handicap, and is not true that younger citizens could face SLA [second language acquisition] in an easier and better way. Learning ability depends only on will. (p. 26)

Provided that, people need to start changing their thoughts and accepting this age group as productive and able to learn. Cornett (2006) added that “Many elderly do not experience extreme adverse effects of the biological, psychological and social aspects of aging. Instead, they remain physically fit and exhibit continued social and psychological abilities” (para. 3). Under those circumstances, most older learners may become successfully part of the language learning process if some factors regarding their age are considered.

**Age-related Factors in EFL Teaching and Learning**

Language instructors must take into account the way old people process information. According to Brown (2007), “abstract thinking, rules, and attention span” are three benefits that language instructors must consider when teaching adults (p.105). Adult learners have more knowledge about the world, and they are able to understand abstract concepts and to relate such concepts with experiences in order to remember them. For example, it is easier to explain the meaning of the word *aware* to an adult than to a kid. In the case of pronunciation, the use of symbols to represent sounds aids senior citizens to comprehend the pronunciation of a sound since they can associate symbols with sounds more easily. Adults do not find many difficulties memorizing rules either, e.g., the rule for the pronunciation of the final -s after verbs ending in a voiceless, voiced or sibilant sound. Learning the pronunciation of a foreign language demands internalizing patterns and rules, and adults have the ability to do so by being concentrated during a long period of time. All these rule-memorization processes must be considered mainly when physical changes become prevalent in older ages.
Physical Changes in the Elderly

Physical changes become noticed as age advances, but there are also internal alterations that modify the proper function of some tissues. The anatomy of the vocal track is affected, so speech sounds could be altered due to voice quality. Tarafder, Datta, Tariq (2012) acknowledged that “‘thin’ voice, vocal fatigue, difficulty in being heard in noisy situations, tremor or shakiness in the voice are common changes found in old people” (p. 83). In conversations an old person might misconstrue some words, and the listener who lacks patience might ridicule the speaker who mispronounced the word. Tarafder, Datta, Tariq (2012) also determined factors that interfere with voice in the elderly such as “thinning of laryngeal mucosa, atrophy of vocal muscles, reduced movement of cricoarytenoid joint, reduced lung volume and capacities; reduced movement of tongue, [and] jaw…” and the loss of teeth (p. 83). All of these factors influence the capacity to utter words and be understood by others. Senior learners may also face difficulties when they want to learn languages that possess sounds different from their native language phonological system. As an illustration, the vocal cords muscles wither as people age, and voicing features of English sounds (such as voiced or voiceless) could be a challenge for an old person to produce. On the whole, the vocal structure degenerates as people grow old, but there are other changes to consider.

Sensorial Changes: Vision

Old people suffer from different physical changes that affect even their senses. The elderly’s capacity to perceive what is in their environment decays as well. Dörr (2006) mentioned that vision is damaged by cataracts, and retinal changes; he added that “presbyopia is the age-related decline in the ability to see close objects clearly” (p. 12). In other words, age disrupts the ability to observe clearly. William (as cited in Thonn, 2005) wrote that “older eyes
need 50 to 70 percent more light than younger eyes when glare is present, as the lens becomes more opaque” (p. 9). Some people have more vision problems depending on other diseases including diabetes. It is important to bear in mind the significance to use proper size of letters or the color of images since most of the visual stimuli come into the mind through the eyes. For instance, in a classroom or in any place in general, the ads, flashcards, posters, bulletins, and brochures must be legible. A disadvantage of blurred materials is that the elderly would waste valuable time trying to analyze the information written in a document. In summary, vision impairments related to age could be minimized by adapting the design of the materials that are perceived by the eyes, and it is equally significant to pay attention to the students’ hearing ability.

Hearing Ability

Another sense that is affected as people age is hearing. In any class, the auditory ability must have an active role. If a student loses the thread of what is happening in the class, s/he might have problems recapping the topics studied in the lesson. The University of Washington (as cited in Speros, 2009) concluded that “more than 50% of older adults are affected by hearing loss or impairment” (p. 4). For this reason, language instructors must be conscious of the relevance of articulating sounds as clearly as possible when teaching senior citizens. For instance, teachers must keep their mouth observable to all students, when explaining concepts and giving instructions. Speros (2009) wrote that “presbycusis and the inability to discriminate between certain speech sounds are common problems… [, and] high-pitched sounds and words with "f", "s", "k", and "sh" sounds are difficult for the older adult to discriminate” (p. 9). Teachers should identify who the learners that have more difficulties listening to him or her are, and language teachers must consider choosing audios that do not contain background
noises because the noise could be a distractor for the learners. In brief, teachers can simplify the information elicited in the class so that learners with hearing problems are be able to internalize the concepts and process them in their brains.

Cognitive Processes

Senior learners process information easily, but cognitive processes present memory deficits in short and long-term memory. Dörr (2006) pointed out that age-related changes in memory “do not prevent most older persons from learning many practical things in their later years” (p. 13). Older adults are able to learn, but they take more time internalizing data. Recalling information is a process that takes time too, but requires less effort than to learn new material. To put it another way, “aging affects long-term memory less than short-term memory, but retrieval of material from long-term memory is slower” (Dörr, 2006, p. 13). Long-term memory helps old learners to keep new information in their brains by “integrating new concepts and material into already existing cognitive structures” (Socrates Grundtvig Organization, n.d., para. 48). The elderly and teachers must not avoid the use of meaningful activities that promote active learning. Concisely, the memorization of isolated material prevents the elderly from acquiring new concepts since they need to organize information just learned with the data kept in the long-term memory, and the working memory decays with age as well.

The long and short-term memory functions diminish in older adults, and the working memory may also show problems as people age. Working memory is defined as “the ability to both process, and remember new information at the same time” (Dörr, 2006, p.2). Additionally, Dörr (2006) concluded that “the working memory typically declines with age” (p. 13), and senior citizens would not be able to make the relationship between what they write
and the purpose of writing the information unless there is an external stimulus that reminds them what they are doing. With this in mind, the number of concepts an elderly processes at the moment must rely on a meaningful context to allow their minds retain the new information. Cornett (2006) suggested that “no more than 3 to 5 points should be made during an instructional session” to avoid confusing (p. 9). It is advisable to present new information step by step. Language instructors should also make use of repetition to highlight the aspect studied in the class since “older adults have a reduced processing speed, [and they] are more easily distracted” (p. 9). Accordingly, since the working memory reduces its ability to process information, it is necessary to know how to present information to the elderly considering at the same time some other changes they may experience.

Not only do senior citizens experience physical and cognitive changes such as the ability to see and hear, and the reduced processing speed, but also some of them suffer from psychological and socio-cultural changes that could interfere in the pace of the learning process. About these changes Cornett (2006) found the following:

The psychological aspect of aging is related to the person’s capacity to adapt. Mood, attitude, self-concept, and personality may all be affected. There may be loss of former roles and status; loss of spouse, family and friends; a decline in economic security; and loss of familiar surroundings. These changes may result in poor self-esteem, depression, and a lack of self-satisfaction… Social changes and cultural factors affect one’s view of him- or herself as a competent individual. Independence is an important aim for the majority of elderly persons, regardless of their health status. It is an expression of self-respect and pride. (para. 5-7)

It could be said that such changes may require the adjustment of the techniques used in a foreign language classroom, but they would not stop students from learning. On the contrary,
even though older learners may need more time, patience, and guidance, they also develop the
sense for independence. This independence is achieved thanks to the companionship given by
their classmates and instructors, and it may lead the elderly to successfully achieve
communication in the target language.

Considering all the physical, psychological, cognitive, and socio-cultural changes that
may interfere in the language learning process, teachers should implement techniques that
fulfill students’ special needs. Besides increasing the font size of the materials and speaking
loudly and clearly, language instructors have to adapt or create their own materials since most
textbooks are intended to be used with younger learners. As Durán (2012) argued, “traditional
textbooks with contents, topics, and exercises designed for younger learners do not work well
for the elderly, who need more contextualized materials to enhance their learning” (p. 14).
Such contextualized materials make students use previously learned information, and compare
it with the new forms for internalization to occur. Schaie, Willis, Hertzog, and Schulenberg (as
cited in Durán, 2012) added that “when the elderly get involved in a stimulating lifestyle, they
keep actively studying and socializing, they maintain their cognitive capabilities” (p. 14).
Real-life like situations developed in the classroom and adapted materials provide older
learners with the tools they need in the foreign language learning process.

**Teaching Pronunciation of English as a Foreign Language to the Elderly**

Before exploring the teaching pronunciation processes for older learners, it is essential
to consider some general aspects about teaching pronunciation as a foreign language.
Teaching a foreign language goes beyond the four macro-skills which are listening, speaking,
reading, and writing. Micro-skills vocabulary, grammar, and pronunciation must take part in
the teaching/learning process since they, together with the four macro-skills, provide accuracy
and proficiency in the target language. In regard to teaching pronunciation, Goodwin (1996) stated that “the goal of instruction is threefold: to enable our learners to understand and be able to be understood, to build their confidence in entering communicative situations and to enable them to monitor their speech based on input from the environment” (as cited in Celce-Murcia, 2001, p. 117). On behalf of these goals, both teachers and learners must work on polishing pronunciation abilities for effective communication purposes only because “learners rarely achieve an accent-free pronunciation, and if we strive them for native like accuracy, we are setting our students up for failure” (Goodwin, as cited in Celce-Murcia, 2001, p. 118). Pronunciation instruction allows EFL learners to produce and receive comprehensible input being successful in the exchange of information.

Researchers suggest not endeavoring students for native-like pronunciation since this is a goal hardly achieved for foreign language learners. To understand and explain this issue to students, it is fundamental to recognize the relationship between accentedness and comprehensibility in a language. Munro, Derwing, and Morton, (as cited in Jun & Li, 2010) stated that “accentedness refers to the degree to which ‘the pronunciation of an utterance sounds different from an expected production pattern’ while comprehensibility focuses on listeners’ estimation of difficulty in understanding” (p. 53). In other words, it could be said that accentedness influences both the production of speech and the understanding of it.

Foreign language learners are challenged to improve their oral performance to make their output comprehensible to the listener. As Munro, Derwing, and Morton, (2007) defended, “A perceived improvement in an L2 learner’s comprehensibility in a randomized listening task must be attributable to an improvement in the speaker’s performance” (p. 360). Accordingly, if students’ performance in the language improves, the comprehensibility level will rise, and
such improvement in learners’ output may be credited to the instruction and the practice of the foreign language.

Sound instruction may help older learners to improve pronunciation in order to be more comprehensible to English speakers. The elderly may face even more difficulties being comprehended since flaccidity and other changes in the vocal organs, may interfere negatively with the message they want to express in a conversation. Besides the physical changes, the elderly’s speech could be interfered by their rooted accent. On this matter, the elderly need to become aware of phonological features, and they must receive appropriate pronunciation feedback to be understood by others. Derwing and Munro (as cited in Saito, 2011) affirmed that “students learning L2 pronunciation benefit from being explicitly taught phonological form to help them notice the difference between their own productions and those of proficient speakers in the L2 community,” and the exposure to instruction allows them to monitor their utterances (p. 46). Pronunciation training lessons about suprasegmental and segmental features help learners to improve their pronunciation intelligibility. On the other hand, Derwing and Munro developed an experiment with English learners, and they discovered that “accentedness did not necessarily interfere with comprehensibility: even heavily accented speech can be highly comprehensible” due to pronunciation awareness (p. 45). The teaching of pronunciation aids senior learners to progress in their pronunciation comprehensibility.

Teaching pronunciation embraces segmental and supra-segmental elements such as intonation, rhythm, stress, reduced speech, linking, and vowel and consonant sounds. According to Goodwin (1996), “learners will usually have difficulty with sounds that don’t exist in their L1… [But,] despite these isolated difficulties, instruction should always focus on sounds in context” (p. 122). This philosophy is equally defended by Nunan (2003) who proposed some other principles for teaching pronunciation. This author stated that teachers
should “foster intelligibility during spontaneous speech, keep affective considerations firmly in mind, provide feedback on learner progress, and realize that ultimately it is the learner who is in control of changes in pronunciation” (p. 117). Therefore, teaching pronunciation should be focused on developing real-life like situations where students practice the sounds in context. In this way, students will be given the opportunity to produce and be the controllers of their own output, and as a result of that, their learning may become more meaningful, memorable, and effective; by doing this, the effects of the critical period could be minimized.

**Critical Period and Input Hypothesis**

The success of learning the pronunciation of a foreign language at different stages of life may be examined through the Critical Period Hypothesis. This hypothesis is defined as “an optimal period for language acquisition, ending at puberty” (Abello-Contesee, 2008, p. 170). In other words, young EFL (English as a foreign language) learners may sound more native-like than old students. Senior citizens struggle more learning how to pronounce the sounds of a foreign language since their first language is rooted in their minds, and the accent differentiates them from native speakers, but “it is not necessarily true that adult learners cannot achieve native-like proficiency in phonology” (Gass & Selinker, 2010, p. 336).

Language teachers must consider the students’ linguistic level and the phonological features of their mother tongue so that students can learn by comparing the sounds that they know with those that belong to the foreign language. It is argued that the Critical Period has an impact on language learning, but it is also true that adult learners may become speakers of a foreign language by making use of appropriate input.

To learn a language during the Critical Period Hypothesis emphasizes the attainment of native-like performance, and the quality of the input that a person receives may also contribute
to a high level of language proficiency. When learning takes place, the memory adjusts the new data with the information already stored in the brain mainly by associating concepts. In the case of adults, they possess a large body of data that aids them in the learning process, so language instructors must consider teaching new rules by means of associations or significant tasks that could remain in the students’ minds. Krashen (1986) claimed that “the acquirer understands input that contains \( i + 1 \)” (p. 21). Language instructors may introduce phonology in a class by giving examples with minimal pairs, or comparing the first language with the second language sounds. This would facilitate their learning since they could link parts of the native language with the unknown ones from the target tongue. The quality of the input provides a guide for learners to attain their goals, and motivation can become the tool they need for success.

**Motivation: Key to Attaining Native-like Pronunciation**

It has been stated that adult learners face significant difficulties when learning the pronunciation of a foreign language. However, the degree of motivation is an encouraging tool to master the sounds. Most of these students learn the language because they want to understand or be understood by speakers of English. Bernaus, Gatbonton, Marinova-Todd, and Masgoret (as cited in Schaetzel & Ling, 2009) discovered that “a personal or professional goal for learning English can influence the need and desire for native-like pronunciation” (p. 2). Older adults taking courses to learn English feel motivated, but they must be consistent and persistent with their goals. Motivation helps learners to find the opportunities to practice the language. Marinova-Todd (as cited in Schaetzel & Ling, 2009) summarized that “adults can become highly proficient, even native-like, speakers of second languages, especially if motivated to do so” (p. 3); if the learners are driven, they will achieve their goals. Not only
will the students enjoy the learning process, but also they will gain accuracy in the target language. To encourage students, teachers need to be aware of the different types of motivation learners may have.

Since motivation increases the learners’ proficiency level, it is significant to identify the kind of motivation students have. The instrumental motivation was described by Dörr (2006) as the one “related to (personal and professional) growth and research” (p. 22). In the case of the elderly, the instrumental motivation is not their inspiration to study another language since at their age, they are retiring or close to retiring from their jobs and their professional growth is in its climax. The integrative motivation “belongs to identity and community acceptance: in a world in which the IT [Information Technology] proliferation covers the whole social scene, living far from IT language –mostly English – means living far from global community” (Dörr, 2006, p. 22). This modern era fosters the learning of a foreign language. The goal of older people is to learn English to become part of this time, and by knowing this, teachers could plan lessons based on real-life experiences to keep the learners’ motivation so that each class ends with positive outcomes. Learners could come from different backgrounds, but they share the same motivation, and the teacher’s responsibility is to identify the source of motivation and create a classroom atmosphere based on this source to facilitate the learning process especially in a foreign context.

**Impact of the English as a Foreign Language (EFL) Setting on Pronunciation**

The role of age in mental processes influences how senior citizens learn, but the EFL setting has some implications in the learning process. According to Henrichsen (n.d.) in an EFL setting, “English is not widely spoken outside the English classroom” (para. 1). One of the main challenges that Costa Rican learners of English face is the fact that they are not
immersed in an environment where English is extensively spoken. In Henrichsen’s words, “students encounter English only in the classroom, and even there… they may not have much exposure to English spoken naturally and fluently,” and this fact interferes with the proficiency level to be achieved at the end of the learning process (para. 1). Teachers of English as a foreign language have the responsibility for fostering an engaging environment where students embrace the learning process, and they look for the opportunities to practice the foreign language not only inside but also outside the classroom. It is the teacher’s duty to nurture the students’ reception and production of the target language including the macro-skills and micro-kills, and it could be done by following five principles to teach pronunciation.

**Teaching Pronunciation Methods**

An authentic methodology based on everyday life situations is needed to make the pronunciation learning process more significant for students. Celce-Murcia, Brighton, and Goodwin (1996) presented a framework for teaching pronunciation based on communication. Such framework consists of five stages for teachers to follow including description and analysis, listening discrimination, controlled practice, guided practice, and communicative practice (p.124). In the first stage, the teacher presents the sound, showing students when and how it occurs. In the second stage, students are given listening discrimination exercises in which they recognize the sound. In the third stage, students face a control practice; this practice helps them to focus on form. Then, in the guided practice stage, students’ attention is centered on meaning. Finally, in stage number five, students take part in a communicative activity which allows them to use the correct pronunciation of the sounds learned (pp. 124-125). Accordingly, the aforementioned stages take students through a journey of pronunciation.
refinement, moving from recognition and practice to spontaneous pronunciation, and those stages must be considered when planning materials and using strategies.

In regard to pronunciation materials and teaching strategies, a vast of sources may be found printed and online. In the light of this matter, Celce-Murcia, Brighton, and Goodwin (1996) presented a compilation of teaching techniques. Those techniques included contextualized minimal pairs, rhymes, poetry, and jokes, kinesthetic activities, audio sources, computer software, and the like. To illustrate, regarding kinesthetic activities, Acton (1984, as cited in Celce-Murcia, Brighton, and Goodwin) pointed out that “trying to imitate the body movements, gestures, and facial expressions of another speaker, whether face-to-face or on video… helps fossilized learners develop more acceptable rhythm [and pronunciation] patterns” (p. 127). In addition, Celce-Murcia, Brighton, and Goodwin (1996), added that “rhymes, limericks, and many poems all have strong patterns of stressed and unstressed syllables that help our learners hear (and to a certain extent feel) the rhythm of English” (p. 126). With this in mind, teachers may employ activities that involve movement or mirroring (watching videos or following computer software) as well as authentic materials such as poems and rhymes that will help students to improve their pronunciation skill.

Adapting Teaching Pronunciation Methods to the Elderly

Several strategies and techniques have been mentioned when teaching pronunciation of English as a foreign language, but unfortunately, few have been found about teaching pronunciation to older learners. There are certain aspects that need to be considered when teaching pronunciation to the elderly. First of all, about The Aging of Voice Tarafder, Datta, and Tariq (2012) found that:
In advanced age, we lose some of the fine coordination that we had in younger years, we lose muscle mass, our mucous membrane becomes thin and dry. Aging affects two main aspects of the vocal folds; anatomy and function. First, much like muscles elsewhere in the body, muscles of the vocal fold loses bulk (atrophy). Second, the flexible tissues which are responsible for vocal fold vibration during voicing (i.e. superficial lamina propria) become thinner, stiffer and less pliable. Together these changes sometimes results in voice which is perceived as sounding ‘old’. (p. 83)

In this regard, the teaching/learning process of pronunciation may be interfered by the aging voice having as its effect difficulties in the articulation of the vowel and consonant sounds.

It is important to mention that accent is more rooted at older ages. Some linguists such as Lenneberg (as cited in Schaetzel & Ling, 2009) support Krashen’s Critical Period Hypothesis which mentions that learners need to learn a language before the age of 7 in order to develop native-like pronunciation (p. 2). If the elderly want to learn a foreign language, they may face some obstacles since their native language patterns are deep-seated. The foreign language sounds that are not present in the native tongue may be even harder for them to articulate. Fricative sounds such as /θ, ð, s (at the beginning of words, before another consonant) z, j, ts, dz, and ʒ/, may involve more difficulty in their production; especially those which are voiced due to the changes in the vocal folds previously mentioned. Older students as well as younger learners of English as a foreign language may find difficult to learn the pronunciation of the target tongue due to differences between spelling and pronunciation (Gilbert, 2008, p. 22). The letter -s may have diverse pronunciation forms as in the words illustrate, illusionist, and impression; not to mention the pronunciation of such a consonant in the plural form of nouns or the third person singular form of the verbs. Therefore, the elderly and other learners may also face a set of obstacles in the learning process, but these issues could
be diminished by using appropriate techniques and materials that suit their physical, psychological, and cognitive needs and processes.

Materials and techniques such as the ones provided by Celce-Murcia, Brighton, and Goodwin (1996) need to be adapted in order to respect older students’ needs. It has been said that senior citizens require “materials with bigger letters” (Dörr, 2006, p. 49). It is suggested to “use bold-faced type or underlining to help readers recognize key points” through the different sections, “use pictures and diagrams, break text into clear sections, and use lots of white space” (Stevens, 2003, p. 6). The use of pictures and diagrams must be carefully done. It is recommended to add only “relevant pictures and diagrams in your text … for illustrating the point and for breaking up the text” (p. 6). To avoid overwhelming, language instructors should organize the material in several sections by using attractive titles and subtitles. Some space must be kept between sections, titles, and practices to allow the learner to read without problems. The modifications done to the materials used to teach elderly people will contribute to the learning process, and when teaching this age group, some principles should be reviewed.

In addition to adapting materials to satisfy older students’ needs, there are some aspects to consider when teaching this population. One of the principles to be followed when teaching the elderly is that of their learning pace. Dörr (2006) said that “An age-appropriate didactic and methodology also attaches importance to the learning pace, which is to be defined individually by the (diverse) learners themselves in order to minimize stress factors (principle of slowness) (p. 40). Drilling may also help senior citizens to learn the correct pronunciation of words. Dörr (2006) mentioned that “Repetitions are an important instrument to strengthen the transfer of new information from the short-term memory to the long-term memory as well as the retrieval of information from the long-term memory (principle of repetition),” and
through receptions the contents studied in class will be internalized easily (p. 40). Drilling “provides learners with intensive practice in hearing and saying particular words or phrases” which may aid them know how to articulate the sounds in a word (Tice, 2004, para. 10). Tice pointed out that teachers may “help learners get their tongues around difficult sounds or help them imitate intonation that may be rather different from that of their first language” (para. 10). A slow pace and pronunciation drilling may be useful to teach pronunciation and learners could obtain a more proficient performance of the foreign language.

It has been stated that the elderly exhibit especial features when learning. Since the 70s researchers as Malcom Knowles have been concerned about understanding the cognitive processes and particular qualities of older learners. All these concerns have helped to adjust and create new methodologies that could offer an appropriate teaching/learning environment for this population. Essential terms such as gerontology, andragogy, geragogy were unveiled and clarified. It was also demonstrated that older learners capacities have direct implications for language instructors due to age-related factors including physical changes, vision and hearing ability. In other words, groups composed of senior citizens should be addressed taking into account the context, and the adaptation of methods to teach the language. Another significant factor discussed was the critical period hypothesis, which impairs the elderly to achieve accurate pronunciation in a language. Even though it is noticeable that older learners suffer from numerous changes, it is necessary to identify their strengths regarding cognitive processes and their motivation to sound comprehensible. The role of motivation in the students’ learning process determines the degree of success to achieve English proficiency.

The theories and concepts pointed out in Chapter Two are the foundations of this research. Most of the ideas presented reveal significant features that characterize older people’s mental processes such as the way they learn. To teach the elderly, language
instructors must be aware of the needs old people have. Teachers must be open-minded and willing to adapt methodologies and materials to facilitate the learning process for older learners.

Chapter Three will provide a deep description of the research design employed, the setting and the population chosen, the variables studied, the treatment implemented and a brief description of instruments and procedures for conducting the study.

The purpose of Chapter Three is to present the quantitative methodology used to fulfill the research objectives stated in Chapter One. This chapter contains the approach and research design of the investigation. In addition, a deep description of the setting, population, and the Gerontology Program at UNED is provided to portray an image of the place where this research is going to take place. The treatment Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) is defined. The measuring instruments and other sources of data are also described in terms of the content, reliability, and validity. The procedures for conducting the study and the data analysis are introduced.

**Research design**

This study is quantitative because it is concerned with variables, numerical analyses, and a group of individuals. Gall, Gall, and Borg (2003) stated that a quantitative study “analyzes social reality into variables,” and this investigation deals with three variables of interest (p. 25). Comprehensibility in the pronunciation of English consonants, the effect of the treatment Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) on the learners’ pronunciation, and age are the three variables that are going to be observed in their “natural…setting ” (p. 25). The variables are the central core of the investigation. Moreover, this research makes use of instruments to collect information about the
pronunciation of English consonants, and the data are examined by employing “statistical methods” to interpret the information and validate the results (Gall, Gall, & Borg, 2003, p. 25). The features that characterize this research provide the tools to “generalize the findings”, and it allows other experts on this field to replicate the work (p.25). The quantitative approach of this research guides the investigators to observe the variables and measure them.

It is significant to establish the design and scope of this research. The study is composed of the independent variable named Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) and the dependent variable identified as the pronunciation of English consonants. The information collected through the instruments determines the consonant sounds that learners have more difficulties with, and the effect that the treatment has on the EFL learners’ pronunciation comprehensibility. For this reason, this study is quasi-experimental in nature since at least one variable is manipulated to obtain a specific result or behavior in the other, in this case; the effect that instruction has on the comprehensibility of students’ pronunciation (Hernández R., Fernández C., & Baptista, P. 1997). The scope of this project is descriptive. According to Ross (2005) a descriptive scope “provides information about conditions, situations, and events that occur in the present... in order to establish a descriptive profile” of the variables involved in the setting of the project (p.3). Therefore, a quasi-experimental design and a descriptive scope constitute the methodology that guides this study.

The Setting and the Population

This quantitative study was developed with students from the Gerontology Program at UNED, Pérez Zeledón. This program provides retirees-to-be and retired people with the opportunity to be part of a continuous learning process by means of several courses such as
INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

art, dance, history, tai-chi, languages, among others. Through this program, the elderly continue attending formal instruction and learn a target language for communication purposes. Nowadays, in Pérez Zeledón there are two groups of older people attending English classes. The English classes are taught at Casa ADEP (Asociación de Educadores Pensionados) due to its proximity to downtown San Isidro. Since most of the students are senior citizens, it is more difficult for them to travel to UNED’s headquarters which is located in Daniel Flores district, around four kilometers from the center of the city. In addition, most students live in the suburbs such as UNESCO neighborhood, Brasilia, El Calvario, among other residential areas located on the outskirts of downtown San Isidro. Each group taking the English course attends a two-hour and a half class on a weekday during twelve weeks. At the time of the research, both groups were taking the course Intermediate English. Granted that, group One was considered the control group and group Two the experimental group. The experimental group under study was composed of three males and five females whose ages ranged from fifty five to seventy four years old. Seventy five percent of these learners were retired teachers and the remaining twenty five percent were still working. The totality of these students belonged to a middle class social status. The language curriculum followed is based on the Communicative Approach, and the courses have as the main objective to teach/learn the target language for communication purposes. Group Two was chosen as the experimental group over group One based on the teachers’ and the investigators’ convenience in regard to class schedule. Among some of the reasons, it could be mentioned the congruity between the English class schedule and the researchers’ investigation time.

Choosing the Sample
Prior to the beginning of the study, the researchers talked to the Gerontology Program authorities and the study was allowed to be developed in Brunca Region. Then, a letter was sent to the Program Headquarter so that the permission was formalized. Selecting the experimental and the control group did not involve major challenges since there are just two groups of senior citizens taking English courses at the Gerontology Program at UNED, Pérez Zeledón, and both are at the intermediate level. Such groups are composed of eight students; therefore, it was not required to choose a sample from each. Stated this, group Two was chosen as the experimental group over group One due to schedule ease for the researchers.

The following table shows specific information such as age and sex of the experimental and the control group.

Table 1. Personal Information from the Experimental and the Control Group

<table>

<td>1</td>
<td></td>
</tr>
</tbody>
</table>

As the previous table shows, most students from both the experimental and the control group are from fifty five to seventy two years old. Only one student from the experimental group was over seventy three years old. Moreover, it is important to mention that most English learners at the Gerontology Program are women; fact that confirms Dörr (2006) and Durán’s (2012) findings on the fact that most of the older learners are women.

Variables of Interest
The analysis of the relationship between the dependent and independent variables determines the effectiveness of using Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) in a language lesson to improve the students’ pronunciation ability. The relevance of the outcomes provides knowledge in the field of the teaching/learning of English as a foreign language. This study is composed of two elemental units (see Table 2). The elemental units are the learners’ pronunciation comprehensibility and the pronunciation comprehensibility expected to be achieved. Moreover, the learners’ pronunciation utterances were evaluated by using the measurement units which elicit the information needed to value the effectiveness of the treatment. As it was already mentioned, the level of the learners’ pronunciation comprehensibility is the dependent variable, and the use of Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) is the independent variable. The elemental units were measured by a test before and after the implementation of the treatment (Interary ECPA) respectively. The pre-test and the post-test were the same to maintain reliability and validity, and two inter-raters evaluated the recordings. In the end, the data analysis showed the role that the independent variable had on the dependent variable.

Table 2 shows the variables of interest that took place throughout the development of this research and they provided fundamental information for the analysis.

**Table 2. Variables**

</table>
INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

- The learners’ pronunciation comprehensibility is evaluated by using the measurement units (pre-test and post-test) which at the same time provide the necessary information required for the analysis.

- Level of the learners’ pronunciation comprehensibility (Dependent Variable).

- The use of Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) (Independent Variable).

- Pre-test: Week 1 (May 6th, 2014)

- Questionnaire: Week 1 (May 6th, 2014)

- Post-test: Week 24 (December 2nd, 2014)

Definition of Variables

There are two variables of interest for the importance of the research, and Table 3 exhibits their conceptual and operational definitions.

Table 3. Definition of Variables

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

The implementation of the treatment depends on three variables. To start with, the dependent variable is pronunciation comprehensibility. It is defined as “the production of sounds that we use to make meaning. It includes attention to the particular sounds of a language, and aspects of speech beyond the level of the individual sound” (Adult Migrant, 2002, p.1). Second, the independent variable corresponds to the treatment called Interary ECPA. The treatment consists of a set of interactive activities such as short stories, tongue twisters, board games, poems, and rallies, and the use of these activities has an effect on the dependent variable. The effectiveness of the treatment is measured by means of the operational definition. As an illustration, the students’ performance in pronunciation will be ranked based on five categories determined as outstanding, acceptable, average, deficient, and
INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

unacceptable. The mentioned categories equal the results of the tests, and the effectiveness of the Interary ECPA is analyzed considering the terms very effective, effective and ineffective. The third element considered in this research is the moderator variable named age. The Freedictionary stated that “people are said to be senior citizens when they reach the age of sixty or sixty-five because those are the ages at which most people retire from workforce,” and the groups under study are composed by learners whose ages range from 55 to 78 years old since the Gerontology Program at UNED (Universidad Estatal a Distancia) embraces 50+ citizens who are entering the old age. The three variables will provide valuable data for the analysis of the results.

The Treatment

The treatment consists of the implementation of Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) in order to improve the comprehensibility in the pronunciation of English consonant sounds in the experimental group. These activities involve poems, short stories, tongue twisters, and problem solving games. However, the researchers designed an entire procedure to teach pronunciation to the elderly (see annex 1: Student’s Booklet) in which each of the Interary ECPA, under the name Discover, were preceded by a set of other stages named Untie your Tongue, Dancing Tongue, and Let’s Activate. A brief description of these stages is provided below.

❖ Untie your Tongue

During this stage the instructor introduces the sound by pronouncing a word that contains such a consonant. Learners also take a look at a picture that illustrates the position of the articulators. The teacher explains some features of the sound such as
voicing and place and manner of articulation. This stage helps the leaners to be aware of how the sound is articulated.

❖ **Dancing Tongue**

By means of a computer software called *Speech Solutions* (property of Computerized Learning Inc.), the learners watch how each sound is produced. Students see the front and side view of the vocal track while articulating the consonant sound being studied. Then, learners imitate the movements shown in the video. In this stage senior citizens also find the *Anchor* which provides the most common spelling patterns with some examples and their corresponding phonetic transcription. Exceptions are also presented in the *Anchor*.

❖ **Let’s Activate**

This stage offers students with two sections or steps. In Step 1 students listen to and repeat seven sentences containing words with the sound under study. These words are illustrated through images for a better understanding of their meanings. Step 2 provides learners with words containing the sound at the beginning, in the middle, and at the end.

❖ **Discover**

This last stage contains one of the Interary ECPA designed to challenge students to practice the sound in a more interactive form.

The researchers developed one of these core activities per week (Interary ECPA). The implementation of these activities was carried out in twenty-four weeks during one extra hour starting on June 3rd and ending on December 2nd 2014. On May 6th 2014 the researchers administered a pre-test to measure students’ comprehensibility in the pronunciation of
consonant sounds before administering the Interary ECPA. After the six-month term of instruction, the researchers tested the effectiveness of the treatment through a post-test.

The following table shows the activities implemented and their main purpose.

Table 4. Activities Implemented

</tbody>
</table>

1. The Blind Story

This activity helps students to recognize English consonant sounds.

How to play:

A. The teacher arranges the classroom so that there is enough space for students to move around.
B. The instructor sets eight lines on the floor and asks each student to stand up in one of the starting points of the rows.

C. The teacher covers the students’ eyes. Then, the teacher starts the game by reading a story containing words with a specific sound.

D. When each learner listens to a word with that specific sound, he/she moves forward.

E. The student who arrives first at the finish line is the winner.

**Materials:**
- The short story
- Station marks
- Handkerchiefs to blindfold students

2. **Move your Body and your Tongue!**

This game helps students to practice English consonant sounds through tongue twisters.

**How to play:**

A. The teacher divides the class in two groups, A and B. The groups take turns to play.

B. The teacher pastes four posters on the board. Each poster contains a piece of a tongue twister.

C. Then, the teacher asks each member the group to stand up facing a poster.

D. Each student reads the part of the tongue twister that is in the poster s/he is facing.

Once each student has read his/her part, they move to the right switching positions in order to read a different part of the tongue twister. The learners continue changing places until all of them have read the tongue twister completely.

E. While group A plays, group B monitors their classmates’ performance.

**Materials:**
INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

- Tongue twisters divided into pieces (one piece written on each poster)
- Masking tape

3. The Sound of Poetry

This strategy gives students the opportunity to practice English consonant sounds by reading poems.

**How to play:**

A. The teacher provides each student with a short poem.

B. Each student reads the poem aloud.

C. Then, students get in pairs, and they take turns to read the poem to his/her classmate.

D. Afterwards, in the same pairs, students think of words containing the sounds being studied and they create a new stanza for the poem.

E. In the end, they read the poem again and share their new stanza with their classmates.

**Materials:**

- Poem
- Dictionary
- Pencil

4. Sound Board Game

This game encourages students to practice English consonant sounds by creating sentences from words given in a board game.

**How to play:**

A. The class is divided into two groups, A and B.

B. The teacher provides each group with a board game, some chips, and a die.
C. Students take turns to roll the die and move through the squares in the board game.

D. When a student lands on a square, s/he completes the challenge given.

A. The student who reaches the finish square first is the winner.

**Materials:**

- Board game
- Chips
- Dice

5. Rally Challenge

This strategy gives the students the opportunity to practice the pronunciation of English consonant sounds through different challenges.

**How to play:**

A. Before the class, the teacher pastes the rally clues and challenges in different parts of the class.

B. When the lesson starts, the teacher divides the class into two groups, A and B.

C. The groups go to the first station and complete the first challenge. Once they have accomplished the challenge, they read the clue to get to the second station, and they leave station one (looking for the second one). Once they arrive at the second station, they complete the challenge, read the clue to get to the third station, and leave. Students continue playing until they get to the finish line.

D. The first group to get to the finish line (after completing five challenges) is the winner.
Note: Challenges may vary from reading a passage containing a specific sound, brainstorming words with a specific sound, identifying a specific sound in a sentence, classifying sounds, and the like.

Materials:

- Challenges
- Pencil
- Envelopes
- Masking tape

Table 5 displays the schedule for the implementation of the activities by term (three months each).

INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

Measuring Instruments and Other Sources of Data

This quantitative research collected data by means of measurable instruments such as a questionnaire, a pre, and a post-test. The questionnaire’s goal was to gather information about the need students have for including deductive instruction of pronunciation in the classroom. On the other hand, the pre-test’s objective was to measure the comprehensibility of students’ pronunciation and management of consonants sounds in the target language, especially those which are not found in the leaners’ native language. Afterwards, the design Interary ECPA for improving the students’ pronunciation was used. This design was employed in the English classes during six months; this period was divided into two cycles. Each three-month term includes twelve hours of instruction.

After this period of pronunciation instruction, a post-test was administered for the purpose of measuring the results and the effectiveness of the treatment developed. Both the pre-test and post-test were evaluated by two inter-raters external to the investigation. These collaborators judged the comprehensibility of students’ consonant pronunciation in group One and Two without knowing which the control group or the experimental group was. All the aforementioned instruments are considered valid since they were specially designed for their purpose, which was garnering information about the comprehensibility of students consonant pronunciation, and as Johnson (1992) stated the instruments are valid when they “measure what they are intended to measure” (p. 53). In addition, these instruments follow the principle of reliability because they are accurate, and they are consistent (p. 54). Students’ comprehensible pronunciation was measured before and after the implementation of the design. The information collected through the instruments is organized by means of figures and tables, and the results of the design are presented using numerical data.
Description of the instruments

In this research, it was vital to make use of three instruments to gather the information necessary to generate conclusions on the matter under study.

Instrument #1: Questionnaire for the Elderly (Annex 3)

The goal of the questionnaire was to gather data about the learners’ background and their opinions about the role of pronunciation in their learning process. The questionnaire had two parts; in the first section, they had to provide some information such as sex, age, education level, social status, and profession. In the second part, students answered eleven questions. In these questions students showed their agreement level (strongly agree, agree, disagree, or strongly disagree) on different aspects related to pronunciation learning and teaching. After choosing an option, students briefly justified their choice in the space provided. All these questions were designed in order to know the students’ opinions and experiences with pronunciation teaching in the English courses they are taking at UNED.

Instrument #2: Pre-test and Post-test (Annex#4)

The pre-test is the instrument number two used to assess the comprehensibility of students’ pronunciation. This instrument is composed of two parts classified as words in isolation and in context. In the first part named as words in isolation, the learners were shown some cards with pictures related to jobs on them. Each picture contained a word with one of the consonant sounds to be studied, and the student taking the test had to pronounce the word. There were twenty four cards for each consonant sound /s, z, t, d, p, b, f, v, g, k, tʃ, ʃ, θ, ð, dʒ, ʒ, m, n, ŋ, l, r, h, w, j/, and the learners’ voice was recorded when pronouncing the words in isolation and in context. In the second part, the students had to read aloud a sentence provided on a card, and each sentence had two sounds in bold. The sounds in bold represented the ones
to be evaluated in terms of comprehensibility. For example, the first sentence is *I like to paint in my book*, and the words *paint* and *book* contain the sounds /p, b/. The inter-raters measured each sound as comprehensible by writing a checkmark next to the sound or sounds. Contrary, if the sound was not comprehensible, the inter-rater wrote an X next to the sound. Both parts of the pre-test were designed with a space for the inter-raters to evaluate them.

**Procedures for Conducting the Study**

Older learners are capable of improving their performance in the pronunciation of English consonants sounds through material that embraces their needs and skills. Interary ECPA takes students to a first encounter with the pronunciation of English consonant sounds. Such activities were designed taking into consideration students’ interests and needs, having as a result a convenient booklet for students and teachers’ employment inside and outside the classroom. In this way, researchers and/or teachers could make use of the Interary ECPA by developing one English consonant sound at a time. This would be one sound per class during one hour. In order for the study to be replicable, researchers must follow the same conditions that characterized the experimental group. These features include, being a group of learners older than 50, studying English as a foreign language. Finally, for the researchers to obtain similar results, it is mandatory that the learners are literate. Consequently, if researchers want to replicate this study, the aforementioned procedures should be followed.

**Data Analysis**

Since the approach of this research is quantitative, the data gathered were analyzed by using statistics. Selinger and Shohamy (1989) pointed out that “analyzing data with the aid of statistics usually makes the research more manageable and more efficient” (p. 202). In addition, it is significant to calculate the scores obtained through the pre-test and post-test in
order to identify important results from the scores for the purpose of this investigation.

Moreover, by comparing both the pre-test and the post-test, the researchers determined the sounds that the learners have more progress with. Then, the information analyzed is presented by using figures such as figures and tables to make clear the ideas concluded. It is relevant to mention that the researchers interviewed and recorded the information uttered by the students, but they did not evaluate or score the tests to maintain the reliability in the investigation. Two inter-raters, one Native American and one Costa Rican language instructor, were required to evaluate the recordings. Finally, the results of the investigation are presented objectively and precisely.

The purpose of this study is to determine to which extent Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) enhances the comprehensibility of senior citizens’ English consonant pronunciation in group Two of the intermediate level from the Gerontology Program at UNED, Pérez Zeledón. This chapter provides a review of the background and the setting as well as the information of how the sample population was chosen. Chapter Four examines the results of the data gathered and provides analysis in the light of the research objectives. This chapter ends by presenting the analysis of the results obtained from the methodology designed (Interary ECPA).

**Background and Setting**

The setting for this study was the Gerontology Program at Universidad Estatal a Distancia (UNED), Pérez Zeledón, which provides non-degree courses to senior citizens. Such courses follow a special methodology that embraces the elderly’s needs and skills. Students at the Gerontology Program attend a two-hour and a half class once a week at Casa ADEP.
(Asociación de Educadores Pensionados) due to its proximity to downtown San Isidro. Two groups taking English courses for oral communication purposes were involved in this research. Intermediate group One was chosen as the control group, being Intermediate group Two the experimental group. Both groups were composed of eight students whose ages ranged from 55 to 72 years old. Only one student was over 73 years old.

**Data Analysis**

The following data were gathered by means of the questionnaire and the pre-test and post-test administered during this research. Such information is presented in four different sections. First, the information from the questionnaire will be exhibited. Then, the data from the Pre-test and Post-test will be displayed in a comparative form, but the information will be divided into two sections: isolated words from words in context. Finally, the grades obtained by the experimental group and the control group will be shown for the purpose of determining the effectiveness of the Interary ECPA.

**Section A: Data from the Questionnaire**

This section analyzes the elderly’s motives towards learning English as a foreign language and their perspectives into the role of pronunciation in the teaching/learning process. In the questionnaire, students were asked to rank from one to four the reasons that motivate them to learn English at their old age, being four the cause of maximum value and one the incentive of minimum value. Table 1 depicts the percentage that the motives obtained in this question.

**Table 1.**

**Percentage Obtained in the Students’ Responses about their Motives to Learn English as a Foreign Language**
The percentage for all the reasons given is superior to 1, which means that all of these reasons were considered sources of motivation to start learning English as a foreign language. When comparing all the results, it is determined that most learners at the Gerontology Program at UNED, Pérez Zeledón accepted learning the target tongue as a personal goal. Nonetheless, a riveting finding in this research is that despite their age, learners still want to continue growing in the professional field. This fact may be justified since two of the students are not retired yet.

In addition, the previous finding confirms Dörr’s (2006) discovery on students’ integrative and instrumental motivation. This researcher claimed that the integration in a globalized society is the real engine that moves older learners to study a foreign language; however, this is not the only source of motivation since there are other personal objectives to be achieved. Equally interesting, it was found that learning English as a hobby is the reason that obtained the lowest value. This may imply that older students do not see learning a foreign language as a hobby because as Dörr (2006) affirmed, they feel engaged in attaining specific goals.

In the questionnaire students were also asked for the role and importance of each micro-skill (grammar, vocabulary, and pronunciation) to achieve an effective communication in the target language. Students were asked to rank such micro-skills from one to three. Three was the maximum value; it was assigned to most important skill. One was the minimum value;
it was assigned to the least important skill. Table 2 presents the percentage that each micro-skill obtained in this inquiry.

Table 2.

Percentage Obtained in the Students’ Responses on the Importance of the Micro-skills

</tbody>
</table>

Note. Information obtained in the questionnaire for students

Table 2 illustrates that according to students, when comparing grammar, vocabulary, and pronunciation, this last micro-skill is the one of major importance to communicate effectively in the foreign language. As a matter of fact, respondents mentioned that mispronounced words may lead to failure.

In the same vein, due to the lack of pronunciation objectives in the course program, students were asked if they agreed on the incorporation of pronunciation instruction in the English class. In regard to this proposal, the totality of the students strongly agreed on the fact that teaching pronunciation is essential when studying English as a foreign language. In the questionnaire students mentioned that pronunciation is a basic element in oral communication and this micro-skill helps them to communicate more effectively and without misunderstandings. In addition, the respondents revealed that at their age, it is more helpful when rules are explained to them.

Section B: Data from the Pre-test and Post-test Regarding the Pronunciation of Consonant Sounds in Isolation
The goal of this section is to examine the comprehensibility of senior citizens’ pronunciation of the consonant sounds in isolation. The learners were asked to read twenty-four words and each of the words corresponded to one of the English consonant sounds.

![Figure 1](image_url). Comprehensibility of learners’ pronunciation of consonant sounds in isolation.

It can be seen that the learners did not have difficulties uttering the /p, b, t, d, g, f, m, n/ in both tests since these sounds belong to the students’ native phonological system. As a result, the learners knew the place of articulation of those sounds. On the contrary, all the learners uttered correctly the sounds /k, s, w, h/ in the pre-test, but in the post-test some of the students did not. This strange behavior may be the result of the incomplete internalization process of rules, in which students may confuse sounds in the target language, or they may transfer rules from the mother tongue. Figure 1 also shows that even though the sounds /l, r/ are part of the students’ native language phonetic system, not all the learners could pronounce them correctly in the pre-test. Some of the learners had difficulties pronouncing the /r/ because of the variations that exist in Costa Rica when saying the r in the words perro ‘dog’, almuerzo ‘lunch’ and atras ‘behind’ (Vásquez, 2007, pp. 295-298). Therefore, the allophones of the /l/ could have affected the comprehensibility of learners’ pronunciation of the r sound. All in all, the
The sound /tʃ/ and /ʃ/ are somehow difficult for the learners since they know how to vocalize /tʃ/ as in the word *ocho* ‘eight’, but /ʃ/ was hard for them. Tserdanelis and Wong (n.d) considered that sounds change their properties depending on the following sound calling this process palatalization. Palatalization “occurs when alveolar, dental and velar stops or fricatives appear before a front vowel [i, e]” changing the original sound into a similar one, and these are “common types of palatalization: [t] → [tʃ]; [d] → [dʒ]; [s] → [ʃ]; [k] → [tʃ]; [g] → [dʒ]” (p. 112). In the pre-test, the learners had to pronounce the words *butcher* and *fisherman*, and it was noticeable that the sounds were palatalized. Indeed, some instruction helped the learners to recognize when to use /tʃ/ or /ʃ/, but the phonetic environment caused difficulties when uttering such sounds.

Figure 1 exhibits that not all the students could articulate the /ŋ/, and the /j/ sounds in the words *singer*, and *yeoman* respectively. The sound /ŋ/ does not have an equivalent sound in Spanish, so some of the learners pronounced it as a /n/. The pre-test reflects the learners’ lack of awareness of the spelling patterns of the /j/ sound. For example, they mispronounced the /j/ sound in words such as *yeoman* perhaps because of the allophonic variation in Costa Rican Spanish to say *yuca* ‘yucca’. Additionally, the sounds /v, ə, z, dʒ, ʒ/ represent a challenge for the students, and learners tended to change the sound into another familiar sound, or they simply eliminated from the utterance. However, through instruction only some students articulated the sounds /ð, dʒ, ʒ/ in a comprehensible form. The previously mentioned sounds involve a degree of vibration, and senior citizens’ age-related changes influence the vocal organs capacity to utter the sounds. The analysis of this figure demonstrates that the learners had some problems articulating the sounds that are not part of their phonetic system, and it is
also displayed that the comprehensibility of students’ pronunciation of some consonant sounds did not improve.

**Section C: Data from the Pre-test and Post-test Regarding the Pronunciation of Consonant Sounds in Context**

In the first section, it was noticeable that the learners’ previous knowledge of the way to pronounce the sounds aid them in the pre-test, but also the treatment provided the learners with some knowledge to utter the sounds. It is equally important to analyze the results garnered from the second part of the pre-test and post-test. In the second part, the students had to read a group of sentences containing the sounds.

Figure 2 depicts that all the students could articulate in the pre-test and post-test the /p, b, m, n, w, r, l/ sounds, and some of the learners mispronounced the /t, d, k, f, s, h/ when they are in context. The pronunciation of the sounds /t, d, k, f, s, h/ may be influenced by the neighboring sounds. The learners also weakened the phonemes affecting their comprehensibility. The students mispronounced the sounds /s, z/ because they are still internalizing the rule for the –s endings as in cats /s/ and dogs /z/. However, the learners were taught the rules of the -s and -ed endings during the implementation of the treatment. Furthermore, these sounds are difficult for the learners due to the amount of air and the position of the tongue required to pronounce the /t, d, k, g, s, h/ sounds. Unexpectedly, in the pre-test the learners showed that a minority of them articulated the /v, θ, ˘, dʒ, ʃ, η/ sounds correctly, and after the administration of the post-test, some students were aware of the right pronunciation of the sounds. Nonetheless, from 30% to 50% of the students could not utter the sounds /θ, ˘, dʒ, ʃ, η/ appropriately in the post-test, and this is due to the fact that they needed more time to learn the sounds. Costa Rican speakers pronounce the sound /v/ as /b/, and when
they learn English, it is hard for them to differentiate them. For this reason, the learners said *bery* instead of *very*. To sum up, there was some improvement after the treatment even in the sounds that do not belong to the learners’ mother tongue.

**Figure 2.** Comprehensibility of learners’ pronunciation of consonant sounds in context.

**Section D: Scores Obtained in the Pre-test and Post-test**

In this section, the scores from the pre-test and post-test are analyzed to determine the effectiveness of the treatment implemented on the experimental group. Two inter-raters were required to evaluate the recordings. Figure 3 contrasts whether Interary ECPA improved or not the comprehensibility of students’ English consonant pronunciation. In the first place, the scores obtained from the pre-test administered to the experimental group, suggest that the comprehensibility of learners’ consonant pronunciation was not null. In the pre-test 63% of the students in the experimental group got scores that range between 70 and 89. On the other hand, the students’ scores from the control group, ranked between the acceptable and average levels in both tests. In the light of the results achieved, the experimental group increased their comprehensible pronunciation after the implementation of the treatment. Consequently, it is
confirmed that although some of the participants upgrade positively the articulation of some sounds, there is major factor prompting mispronunciation which is age.

As it has been stated through the investigation, age may influence the comprehensibility in senior citizens’ pronunciation. As the human being ages, there are certain changes in the auditory and articulatory systems that may alter students’ input and output. If senior learners have hearing problems, the information received and articulated may differ from the one produced by the speaker. In the same vein, if leaners suffer from flaccidity, reduced movement of tongue, loss of teeth, vocal cords damage, etc., the sounds may not be properly uttered. Another factor that needs to be considered to understand the results of the investigation is time. Senior people need more time to internalize and process information since, as it was clarified by Dörr, the working memory declines with age. It is probable that by the time of the post-test students had not internalized the data. Practice also plays a meaningful role in the improvement of the comprehensibility in English consonant pronunciation. Older learners need sufficient practice, and it is known that the class is not enough. Students need to invest extra time in order to improve, yet the researchers could not supervise this factor. As a result, the progress in senior learners’ comprehensibility in pronunciation is feasible, but age is a component that may affect the accomplishment of the final goal.
Figure 3. Scores obtained from the pre and post tests administered to the experimental and control group. The acronyms stand for the groups taking part in this research. Exp= Experimental; Ctr= Control.

At the end of the investigation, it is possible to state the effectiveness of the implementation of Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) in the intermediate group Two of senior citizens in Pérez Zeledón. The instrumental definition named the post-test determined that the treatment is very effective since 88% of the students’ scores ranked in the acceptable descriptor level. In the long run, instruction makes students conscious of the place of articulation and voicing features of the sounds, and instruction allows learners to be able to pronounce the consonant sounds and improve the comprehensibility in their speech.
The purpose of this study was to determine to which extent Interactive-literary English Consonant Pronunciation Activities (Interary ECPA) enhances the comprehensibility of senior citizens’ English consonant pronunciation in group Two of the intermediate level from the Gerontology Program at UNED, Pérez Zeledón. Chapter Five provides a summary of the background information and setting, and examines the findings of the research carried out to finally arrive at the conclusions. Likewise, this chapter offers some recommendations to be considered by teachers and researchers on the field.

**Background and Setting**

This study took place at the Gerontology Program at Universidad Estatal a Distancia (UNED), Pérez Zeledón. The program offers a wide range of courses to senior citizens such as English, art, dancing, aerobics, tai-chi, history, and agriculture. The previously mentioned
courses are designed to fit and satisfy the senior citizens’ requirements. Learners enrolled in the courses attend to a two-hour-and-a-half session per week during twelve weeks. English courses in Pérez Zeledón are taught at Casa ADEP (Asociación de Educadores Pensionados) because of its proximity to downtown San Isidro, which facilitates the learners’ arrival at classes. Currently, there are two groups taking the intermediate English course. Group number Two was chosen as the experimental group and group number One as the control group in this research. The group under study was composed of three males and five females between fifty to seventy four years old: six of these eight students are retired teachers.

**Methodology and Research Design**

Interactive-Literary English Consonant Pronunciation Activities (Interary ECPA), as its name implies, is a set of interactive and literary activities such as board games, rallies, poems, short stories, and tongue twisters for senior citizens to learn the pronunciation of English consonant sounds. This design aims at improving the elderly’s pronunciation performance while considering their special needs and skills during the foreign language learning process. Such a goal is achieved by providing comprehensible and easy-to-follow exercises which, at the same time, are complemented with sufficient time for students’ repetition and practice of the target language sounds. Interary ECPA was originally designed to be implemented in a group of eight older learners taking the intermediate level at the Gerontology Program at Universidad Estatal a Distancia (UNED).

**Discussion of Findings and Conclusions**

This study has contributed to the field of linguistics and teaching in the way that it provides a review of the elderly learning processes and the methodologies that should be followed to embrace these students’ needs and skills. In the same vein, this research becomes
a stepping stone for future investigations. Moreover, a student’s booklet is provided for older people to learn the pronunciation of English consonant sounds, and a teacher’s guide is given to facilitate the instruction process. At the end of this study, the researchers arrived at the following conclusions. First, the students under investigation started learning a foreign language as a personal goal; only a minority sees this process as a hobby. Second, students considered pronunciation an essential skill for effective communication, and they gave more value to this micro-skill than to vocabulary or grammar. Third, due to the lack of pronunciation objectives in the course program followed at the Gerontology Program at Universidad Estatal a Distancia (UNED), the totality of the participants agreed on the importance of the incorporation of pronunciation instruction. This being said, it could be interpreted that the elderly study English as a foreign language because they want to be part of a globalized society that craves for socio-cultural communication, and they consider pronunciation as a key to achieving effectiveness in this communication phenomenon.

In this study, it was also noticed that the existence of the target language sounds in the learners’ mother tongue allowed students to be aware of the pronunciation of some words. In fact, the advantage of sharing sounds between languages eased the learning process. This is the case of the sounds /p, b, t, d, g, f, m, n, l/ present in both Spanish and English. Moreover, in the post-test, some learners mispronounced the /t, d, k, f, s, h, r, l/ when the sounds were in context even though these sounds were part of their phonetic system. The amount of air needed to vocalize the sounds could be altered depending on the position of the articulators, and uttering the sounds is a challenge for the elderly. Additionally, the variations found in the Spanish of Costa Rica when saying the /r, j/ in some words could also have interfered in the English pronunciation of the /r, j/. It is equally important to mention that when the learners’ language had a phoneme similar to a sound of the target language, the learners uttered it
easily. Nonetheless, the learners found obstacles when the sound in the target language had a counterpart such as /tʃ/ and /ʃ/ and /s, z/.

Since the sounds /v, θ, ʒ, z, ð, θ, ʒ, ŋ/ are not part of the learners’ native language, some students continued having difficulties to utter such sounds appropriately. Some learners mispronounced the target language sounds by changing them into other sounds that exist in their mother tongue. Most learners improved the pronunciation of some sounds, but age may have interfered in the comprehensibility of some sounds since the vocal system withers through time. Therefore, the voicing feature and place and manner of articulation are altered by the flaccidity of the muscles prompting mispronunciation.

**Recommendations**

After this investigation journey, the researchers recommend to consider the following aspects.

**Recommendations for Researchers**

First of all, any quasi-experimental study should be carried out with sufficient time. The implementation of a design takes time, especially with this population, time is the key element. Not only do older learners need to work in a slower pace, but they also need to repeat as many times as possible. It could be seen in the results that students had difficulties articulating some sounds in both isolation and context. Therefore, the researchers recommend implementing the treatment for a longer period of time in order to internalize and improve the comprehensibility of such sounds. Equally important, researchers need to consider that the elderly usually misses classes because of health problems or just because of personal issues such as taking care of their grandchildren or their ill spouses. In brief, as a strong
recommendation: be patient and open-minded; there is so much you can learn from senior citizens.

**Recommendations for Teachers**

As a first recommendation, teachers must not ignore the similarities between languages to take advantage of them in their classes. Older learners use many references from the native language to understand the target tongue. In the case of pronunciation, there are several sounds shared in English and Spanish. This congruence could facilitate the teaching/learning process. However, instructors must keep in mind that even though the /t, d, k, f, s, h, r, l/ sounds are in Spanish and English, the learners need to study how the sounds are pronounced since the students could face some negative interference. Whenever language professionals have to teach a sound, they should consider presenting the sound along to its counterpart, for example, /tʃ/ and /ʃ/ and the different spelling patterns representing the sounds. Remember also that the fact that the elderly’s vocal track has changed due to age does not mean that teaching pronunciation to this population is a waste of time. On the contrary, pronunciation instruction provides students with the knowledge needed to improve their oral production and comprehensibility in the language.

Following the researchers findings on teaching methodologies for older learners, there are some aspects that any language instructor should consider when teaching this population. First, keep in mind that most senior learners have vision and hearing problems. Stay close to the learners, and make sure they can see your mouth and articulatory system when you produce the sound. In this way, students are able to imitate your movements. Take advantage of computer software or web sites designed for teaching and practicing pronunciation. There are many programs and sources that allow students to see how the tongue, lips, and jaw move...
INTERARY ECPA FOR THE ELDERLY’S ENGLISH PRONUNCIATION

while articulating a sound; these sources are significantly useful and students love it. Speak loudly and clearly. Use an easy-to-read font and avoid using letter sizes lower than 14. Use bold faced letters when necessary too, organize the material by sections, and use appealing titles. Moreover, keep in mind that older learners need drilling and repetition to internalize and retrieve information in their long term memory. The treatment is intended to be administered during one hour of a two hour and a half class, so encourage learners to continue practicing the correct pronunciation of the consonant sounds in the rest of the class. Use real life like situations always. Finally, follow a low pace. Give senior learners enough time to read and practice, and provide students with the recordings so that they can review and practice at home.

Considering all the previous methodology aspects, the researchers recommend using the INTERARY ECPA (INTERACTIVE-LITERARY ENGLISH CONSONANT PRONUNCIATION ACTIVITIES) to improve the comprehensibility in the English consonant pronunciation of older learners (see annex 1: Student Booklet). Interary ECPA is an understandable and easy-to-solve practice of English consonant sounds. The researchers advise to provide students with the booklet specially designed to embrace their needs and skills. At the same time the researchers offer language instructors with the teacher’s guide (see annex 2: Teacher’s Guide) for the activities and the answer key for each of the units.

Recommendations for Senior Learners

First of all, the researchers encourage older learners to pursue their goal of learning English and boost them to never give up. Said that, the researchers advice students to practice at home. Play the class audio and review the pronunciation rules. Repeat the words and sentences as many times as needed. Enjoy and learn!
Chapter five brings out a brief summary of the background, setting, methodology and the design used during this research to give any reader an overview of what has been done. Following that, the discussion of findings and the conclusions are described to understand the contributions this study gives to the teaching of pronunciation to the elderly. In addition, the recommendations will guide future researchers and language instructors. In conclusion, all the information has been documented to widen the comprehension on this field.

Student Booklet

Created by:
Verónica Brenes Sánchez
Evelyn Valverde Marín

The key to succeeding in learning something new is not age but will.

Brenes & Valverde, 2015
This student booklet contains a set of interactive literary activities to aid senior citizens to learn the pronunciation of English consonant sounds.

The Interary ECPA aims at improving the comprehensibility of the elderly’s pronunciation by presenting an understandable and easy-to-solve practice of English consonant sounds. Nonetheless, it is advisable to follow a low pace, giving students enough time for repetition and use of the target consonant sounds.
**Objective:** To improve the comprehensibility of the /p/ sound.

**Dancing Tongue**

**Instructions:** Watch the video and learn how to articulate the /p/ sound.

**Introducing the /p/ sound:**

**Instructions:** Pay attention to the spelling patterns of the words. Practice the /p/ sound aloud.

**MOST COMMON SPELLING:**

- **p**
  - pilot /ˈpɔɪlət/, carpenter /ˈkɑːrpəntər/, stop /stɑːp/

- **pp**
  - apple /æpl/, appreciate /əˈprɪʃɪet/, pepper /ˈpepər/

When -p is followed by -h, -p is not pronounced as /p/ but as /f/:
- photo /fəˈtəʊ/, physics /ˈfɪzɪks/.
Step 1: 

Instructions: Listen and repeat the following sentences.

1. I like to take a nap every day.
2. Apes are friendly and playful.
3. Peacocks are beautiful and colorful.
4. Steven loves his grandma’s pie.
5. I mop the floor every other day.
7. My mother makes natural soap.

Images taken from Google Images

Step 2: 

Instructions: Read the words. Practice the /p/sound.

<table>

Phenomenal Woman
by Maya Angelou

Pretty women wonder where my secret lies.
I'm not cute or built to suit a fashion model's size
But when I start to tell them,
They think I'm telling lies.
I say,
It's in the reach of my arms
The span of my hips,
The stride of my step,
The curl of my lips.
I'm a woman
Phenomenally.
Phenomenal woman,
That's me...

...Now you understand
Just why my head's not bowed.
I don't shout or jump about
Or have to talk real loud.
When you see me passing
It ought to make you proud.
I say,
It's in the click of my heels,
The bend of my hair,
the palm of my hand,
The need of my care,
'Cause I'm a woman
Phenomenally.
Phenomenal woman,
That's me.

**Objective:** To improve the comprehensibility of the /b/ sound.

**Dancing Tongue**

**Instructions:** Watch the video and learn how to articulate the /b/ sound.

**Introducing the /b/ sound:**

**Instructions:** Pay attention to the spelling patterns of the words. Practice the /b/ sound aloud.

**MOST COMMON SPELLING:**

- **-b**
  - beautiful /ˈbjutəfəl/, robot /ˈrəʊbət/, web /web/
  - pebble /ˈpebl/, cabbage /ˈkæbɪdʒ/

When -b is followed by -m, -b is not pronounced

- plumber /ˈplʌmər/, lamb /læm/
Step 1: Instructions: Listen and repeat the following sentences.

1. Bats have special radars.
2. The scribe writes on a stone.
3. He couldn’t stop sobbing.
4. Lucy has a beautiful baby.
5. My family reads the Bible on Sundays.
6. He broke a rib in an accident.
7. I fry onions and garlic in butter.

Step 2: Instructions: Read the words. Practice the /b/sound.

<table>

Betty Botter bought a bit of butter. "But," said she, "this butter's bitter. If I put it in my batter, it will make my batter bitter. But a bit of better butter That would make my batter better." So Betty Botter bought a bit of better butter (Better than her bitter butter) And she put it in her bitter batter And made her bitter batter a bit better.

http://www.schooljokes.com/tongue_twisters/butter.html
**Objective:** To improve the comprehensibility of the /t/ sound.

---

**Introducing the /t/ sound:**

**Instructions:** Pay attention to the spelling patterns of the words. Practice the /t/ sound aloud.

---

**SPELLING PATTERN:**

- take /teɪk/, steak /steɪk/, cat /kæt/

---

When –t or –tt is between vowels, the /t/ sound is not aspirated, and it is usually pronounced as /ɾ/ in American English. This sound is known as flap. For example:

- bottle /ˈbɑːl/, settle /ˈsetl/, better /ˈbɛtər/, city /ˈsɪti/, water /ˈwɔtər/
Step 1:
Instructions: Listen and repeat the following sentences.

1. Use some tissues when you are going to sneeze!

2. We work better as a team.

3. Plant a tree and save the planet.

4. We went down the street.

5. I love eating fast food.

7. I asked the hotel for an extra

Step 2:
Instructions: Read the words. Practice the /t/ sound.

Trip to the Past!!!

Add -ed at the end of the verb to talk about events in the past; for example, when talking about your last vacation.

If the base form of the verb ends in the sounds:

- ed is pronounced as /t/

Past Tense of Regular Verbs

Examples:

1. The tiger stopped for a drink.
2. I laughed so hard when she told me.
3. Nanny cooked a terrible meal.
4. I faxed the document yesterday.
5. Mary washed the dishes after dinner.
6. Tom watched the movie last week.
The Roar of Freedom

Once upon a time, there was a young tiger whose teeth were big and fierce, but he had a secret hidden in the deepest of his heart. Since he was a new born, the tiger wanted to explore the wild by his own; he hopped to break the family bond and never become the alpha of the pride as he was supposed. One day, the tiger showed his feelings to his mom; of course, she was the sweetest of them all. On the other hand, his father was the toughest tiger on the land; his enforcing rules were not to ignore. Days passed, and the young tiger decided to speak. His father’s reaction was no other but rage, and the young tiger was rejected as no one had been before. But the young tiger did not give up; he raised his head and kept on his way. In the end, it was what he had always dreamed. He was free, and it did not matter how lonely he felt; he was the owner of his own life, and he could rule his life as pleased. Years went by, and one day the tiger, no longer as young as before, met his father in the wild. The old feline was sorry for not trusting his son, but it was too late, the tiger would never forgive his father for what he had done.
**Untie your tongue /d/**

Session 4: /d/

**Objective:** To improve the comprehensibility of the /d/ sound.

---

**Voiceing:** Voiced Sound

**Place & Manner of Articulation:** Alveolar Stop

---

**Instructions:** Watch the video and learn how to articulate the /d/ sound.

---

**Introducing the /d/ sound:**

**Instructions:** Pay attention to the spelling patterns of the words. Practice the /d/ sound aloud.

---

**Most Common Spelling:**

- *d* dizzy /ˈdizi/, introduce /ˌɪntrəˈdjus/

**Other Common Spellings:**

- *-dd* pudding /ˈpudɪŋ/
- *-d* played /pleɪd/

---

The spelling [d] is not always pronounced /d/: education /ˌɛdʒəˈkeɪʃən/, handsome /ˈhænsəm/
### Instructions: Listen and repeat the following sentences.

1. Luis is glad because he passed the course.
2. This kid can’t sleep without his pillow.
3. The cat is under the chair.
4. The door was opened at night.
5. This is the end of the road.
6. Tango dancers practice every day.
7. Lucy always eats candies after lunch.

### Step 2: Instructions: Read the words. Practice the /d/sound.

<table>
<thead>
<tr>
<th>Starting with /d/</th>
<th>/d/ in the middle</th>
<th>Ending with /d/</th>
</tr>
</thead>
<tbody>
<tr>
<td>doctor</td>
<td>advice</td>

</tbody>
</table>
Add -ed at the end of the verb to talk about events in the past; for example when you are going to talk about your last vacation.

If the base form of the verb ends in the sounds:

- jogged
- damaged
- humed
- turned
- lived
- realized

- robbed
- filled
- sunbathed
- offered
- clanged
- played

- ed is pronounced as /d/

**LET’S PRACTICE!**

**Instructions:** Read the sentences aloud. Practice the /d/sound.

1. He jogged three hours this morning.
2. I turned on the TV to watch baseball.
3. She lived in Canada last year.
4. A thief robbed the bank.
5. Joshua offered to fix the computer.
6. We played cards and I won.
Make small groups to play with the board game provided by your teacher. Look for a coin and some counters. Have fun! 😊
Untie your Tongue /k/

Place & Manner of Articulation: 
VELAR STOP

Voicing: Voiceless Sound

**Objective:** To improve the comprehensibility of the /k/ sound.

---

**Dancing Tongue**

**Instructions:** Watch the video and learn how to articulate the /k/ sound.

---

**Introducing the /k/ sound:**

**Instructions:** Pay attention to the spelling patterns of the words. Practice the /k/ sound aloud.

Ken quite likes Kate. Kate doesn't care for Ken.

Ken catches Kate and kisses her quickly.

Kate cries, kicks and screams.

Ken cowers in the corner.

Ken cures Kate with a quick cup of coffee and a cream cake.
Objective: To improve the comprehensibility of the /g/ sound.

Instructions: Watch the video and learn how to articulate the /g/ sound.

Introducing the /g/ sound:

Instructions: Pay attention to the spelling patterns of the words. Practice the /g/ sound aloud.

MOST COMMON SPELLING: 
- **g**
  - guess /gɛs/
  - hungry /ˈhʌŋɡri/
  - fog /fɔɡ/

OTHER COMMON SPELLINGS:
- **gg** beggar /ˈbɛɡər/

LESS COMMON SPELLINGS:
- **X**
  - exotic /ɪgˈzætIk/,
  - exhaust /ɪgˈzɔːst/
Step 1: Instructions: Listen and repeat the following sentences.

1. I would like to eat a bunch of grapes.
2. Julio has a little pig called Fran.
3. Golf is not popular in Costa Rica.
4. Seagulls love eating fish.
5. Two horses are pulling the wagon.
6. His wig flew away.
7. I need to wash the rug.

Step 2: Instructions: Read the words. Practice the /g/sound.

**Symphony in Yellow**

by Oscar Wilde

An omnibus across the bridge
Crawls like a yellow butterfly,
And, here and there, a passer-by
Shows like a little restless midge.

Big barges full of yellow hay
Are moored against the shadowy wharf,
And, like a yellow silken scarf,
The thick fog hangs along the quay.

The yellow leaves begin to fade
And flutter from the Temple elms,
And at my feet the pale green Thames
Lies like a rod of rippled jade.

Unexpected Holiday Threat

Every fourth of December Sofía traveled to her parents’ house for the holidays. Her birthday was also in the same month, so the Smith’s had many reasons to celebrate and be thankful for. This Christmas was going to be perfect, everything was well planned. In the morning of the fifth, Mr. Smith got sick. He was a healthy man, but his head hurt so much, and the pain went down his throat. It was a toothache, Mrs. Smith thought, but Sofía never believed so. She immediately took her father to the doctor. His teeth were ok, but his head had a flaw. The Smith’s family instantly had the worst thought; death was not an easy thing to deal with. For their relief, the doctor soon found out it was nothing to be afraid of; some weeks of treatment will bring Mr. Smith’s health back. The family shortly recovered their faith, and started to see the holidays in a different way.
Objective: To improve the comprehensibility of the /ð/ sound.

Instructions: Watch the video and learn how to articulate the /ð/ sound.

Introducing the /ð/ sound:

Instructions: Pay attention to the spelling patterns of the words. Practice the /ð/ sound aloud.

MOST COMMON SPELLING:

- th - at the beginning of function words: these /ðiz/
- the - at the end of words: breathe /brið/
- th - between vowels: father /faðər/
Step 1: Instructions: Listen and repeat the following sentences.

1. They are our friends.
2. The weather forecast for today is good.
3. The actor used a feather to write.
4. Her father is an artist.
5. The plant withered after it was cut.
6. Julio and Julia sunbathed in the morning.
7. He was stressed, so he breathed and relaxed.

Step 2: Instructions: Read the words. Practice the /ð/ sound.

The –s at the end of the verb is pronounced /s/ when it ends in p, t, k, f (voiceless sounds).

Pronounce the –s like /s/ in the plural nouns that end in p, t, k, f (voiceless sounds).

The –s in the possessive always sounds like /s/ when the last sound in the noun is voiceless.

The contacted form of is or has is pronounced /s/ when the noun or pronoun ends in p, t, k, f.
Messy Room by Shel Silverstein

Whosever room this is should be ashamed!
His underwear is hanging on the lamp.
His raincoat is there in the overstuffed chair,
And the chair is becoming quite mucky and damp.
His workbook is wedged in the window,
His sweater's been thrown on the floor.
His scarf and one ski are beneath the TV,
And his pants have been carelessly hung on the door.
His books are all jammed in the closet,
His vest has been left in the hall.
A lizard named Ed is asleep in his bed,
And his smelly old sock has been stuck to the wall.
Whosever room this is should be ashamed!
Donald or Robert or Willie or--
Huh? You say it's mine? Oh, dear,
I knew it looked familiar!

A Baseball Game

This is the story of Charles a baseball player. In his first match, he didn’t know what position to take, but his friends knew he was a good batter, and they cheered him up during the game. In the last minute, he had to score the point his team needed to win. He leaned his chest, chose the best position and watched the ball coming. Charles couldn’t even touch the ball the first time the pitcher threw it because some children were making loud noises to catch his attention. Fortunately, the coach, the butcher of the town, reminded him of the ball. The second time he hit the ball, it flew so high that he made a home run, and the ball got inside a neighbor’s kitchen. They went to take the ball as a prize. Charles thought he was mature enough to talk to the woman. He got his best posture and reached the door’s bell. The woman looked through the kitchen window angrily and told the pitcher they had ruined a picture. She took the ball and threw it into her neighbor’s orchard. They chased the ball. In the porch there was an old woman playing with a friend. The woman stood up and gave them a speech about the situation, and they couldn’t believe their eyes because she returned them the ball and invited them to eat sandwiches with cheese. Charles learned the lesson, and next time he would not throw the ball into a kitchen but into an orchard.
**Objective:** To improve the comprehensibility of the /dʒ/ sound.

Do Not Stand By My Grave And Weep
By Mary Elizabeth Frye

Do not stand at my grave and weep
I am not there; I do not sleep.
I am a thousand winds that blow,
I am the diamond glints on snow,
I am the sun on ripened grain,
I am the gentle autumn rain.

When you awaken in the morning's hush
I am the swift uplifting rush
Of quiet birds in circled flight.
I am the soft stars that shine at night.

Do not stand at my grave and cry,
I am not there; I did not die.
Objective: To improve the comprehensibility of the /n/ sound.

Introducing the /n/ sound:

Instructions: Watch the video and learn how to articulate the /n/ sound.

Most Common Spelling:
- -n again /ə'gɛn/

</table>
Ned Nott was shot and Sam Shott was not. So it is better to be Shott than Nott. Some say Nott was not shot. But Shott says he shot Nott. Either the shot Shott shot at Nott was not shot, or Nott was shot. If the shot Shott shot at Nott was not shot, or Nott was shot. But if the shot Shott shot at Shott, then Shott was shot, not Nott. However, the shot Shott shot shot not Shott -- but Nott.

Untie your tongue /ŋ/

Session 19: /ŋ/

Voicing: Voiced Sound

Place & Manner of Articulation: Velar Nasal

Objective: To improve the comprehensibility of the /ŋ/ sound.

Instructions: Watch the video and learn how to articulate the /ŋ/ sound.

Introducing the /ŋ/ sound:

Instructions: Pay attention to the spelling patterns of the words. Practice the /ŋ/ sound aloud.

MOST COMMON SPELLINGS:

-ng at the end
  thing /θŋ/, wrong /rʊŋ/

-ngue at the end
  tongue /təŋ/

-n before g or k
  finger /ˈfɪŋər/, think /θɪŋk/
Step 1:

**Instructions:** Listen and repeat the following sentences.

1. I would love to learn many languages!
2. The king is no longer strong or young.
3. My uncle loves singing pop songs.
4. The bird opened its wings and flew.
5. My boss was angry at me yesterday.
6. The bank in Congo offered me a good loan.
7. I sprained my ankle when I was running.

---

Step 2:

**Instructions:** Read the words. Practice the /ŋ/sound.

<table>
<thead>
<tr>
<th>Starting with /ŋ/</th>
<th>/ŋ/ in the middle</th>
<th>Ending with /ŋ/</th>
</tr>
</thead>
<tbody>

</table>
Dancing in a Shining Morning

Sammy was playing cheerily in the swing her father had built for her. She was singing that lullaby that her mom always sang before going to sleep, and her brother Manny enthusiastically listened to it. Manny thought that no one in this world had such an angel voice. He thought that this song could make any ear rejoice. Sammy saw how delighted her brother was and invited him to join bass.

“dancing in a shining morning
hugging the glowing sun
hearing the eager warning
of the mother calling her son”

And both sang their song while playing in the beloved swing; flying like newborn eagles that have just opened their wings.
Objective: To improve the comprehensibility of the /j/ sound.

Instructions: Watch the video and learn how to articulate the /j/ sound.

Introducing the /j/ sound:

Instructions: Pay attention to the spelling patterns of the words. Practice the /j/ sound aloud.

MOST COMMON SPELLING:
- **-y**
  young /jʌŋ/
  you /jʊ/

OTHER SPELLING PATTERNS:
- **-u** usually /ˈjuːzəli/  -**eu** Europe /ˈjuːərəp/
- **-i after n/l**
  million /ˈmɪljən/,
  California /ˈkælɪfɔrnjə/
- **-ew** few /fjuː/  -**iew** interview /ˈɪntərvju/
1. I’m learning how to use a computer.

2. I don’t like eating the yolk.

3. Cutting onions makes me cry.

4. Vanessa went to a job interview yesterday.

5. Jenny loves listening to music in her yard.

6. My family is celebrating the New Year in a yacht.

7. They were arguing at the museum.

---

### Step 2:

**Instructions:** Read the words. Practice the /j/ sound.

Did the young millionaire put a yellow yolk in his yogurt?
If the young millionaire put a yellow yolk in his yogurt,
Where's the yellow yolk the millionaire put?
Objective: To improve the comprehensibility of the /r/ sound.

Introducing the /r/ sound:

Instructions: Pay attention to the spelling patterns of the words. Practice the /r/ sound aloud.

MOST COMMON SPELLING:

- r
  rabbit /ˈræbit/
  rainbow /ˈreɪnbw/

OTHER SPELLING PATTERNS:

- rr
  sorry /ˈsɔrɪ/, tomorrow /təˈmɔrəʊ/

-w before -r is mute
  wrist /ˈrɪst/, write /ˈraɪt/
Step 1:

Instructions: Listen and repeat the following sentences.

1. Mary wants to marry Randall.
2. I opened the wrong door.
3. Ronny will buy a red car.
4. Yesterday I bought strawberries and cranberries.
5. Roxana loves reading under the tree.
6. Raul likes drinking margaritas on New Year’s Eve.
7. Roy bought Rita a bunch of red roses.

Step 2:

Romance, who loves to nod and sing
With drowsy head and folded wing
Among the green leaves as they shake
Far down within some shadowy lake,

To me a painted paroquet
Hath been—most familiar bird—
Taught me my alphabet to say,
To lisp my very earliest word
While in the wild wood I did lie,
A child—with a most knowing eye.

Of late, eternal condor years
So shake the very Heaven on high
With tumult as they thunder by,
I have no time for idle cares
Through gazing on the unquiet sky;
And when an hour with calmer wings
Its down upon my spirit flings,
That little time with lyre and rhyme
To while away—forbidden things—
My heart would feel to be a crime
Unless it trembled with the strings.

3. Read the clues in order to know where you should go (the order of the stations). Go through the five stations completing the challenges.

4. The group that finishes first is the winner!
**Objective:** To improve the comprehensibility of the /h/ sound.

**Introducing the /h/ sound:**

- **MOST COMMON SPELLING:**
  - h
  - heavy /ˈhɛvi/
  - hand /hænd/
  - perhaps /ˈpɜːrˈhæps/

- **LESS FREQUENT SPELLINGS:**
  - wh- who /ˈhuː/

- /h/ is silent when it is preceded by:
  - g- ghetto /ˈɡɛtəʊ/
  - k- khaki /ˈkɑːkɪ/
  - r- rhino /ˈrɪnəʊ/

**Instructions:**

- Watch the video and learn how to articulate the /h/ sound.
- Pay attention to the spelling patterns of the words. Practice the /h/ sound aloud.
**Step 1:**

**Instructions:** Listen and repeat the following sentences.

1. Robert makes hats for hot days.

2. The car you are looking for is behind you.

3. Put some honey on your bread.

4. Firefighters are real heroes.

5. Helen says that hamburgers are healthy.

6. Herbert has hundreds of hens.

7. The lighthouse warns ships of danger.

---

**Step 2:**

**Instructions:** Read the words. Practice the /h/ sound.

The key to succeeding in learning something new is not age but will.

Brenes & Valverde, 2015
Teacher’s guide to the INTERARY ECPA for Senior Citizens learning English as a foreign language

This teacher’s booklet is intended to guide language instructors in the teaching process of pronunciation comprehensibility of English consonant sounds. Therefore, this guide provides the steps to be followed in the different activities found throughout the student booklet.

We hope it comes in handy!

Brenes & Valverde, 2015

Session 1: /p/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /p/. Tell students this sound is called voiceless bilabial stop.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /p/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /p/ sound occurs.

Let’s Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /p/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Discover

Read the poem to students. Ask them to circle the words containing the sound /p/. Afterwards, encourage learners to read the poem individually. You may ask students to work in pairs and take turns reading the poem.

Make sure students know the vocabulary in all the activities!
Phenomenal Woman
by Maya Angelou

Verse 1:
1. Line #1. pretty
2. Line #7. span
3. Line #7. hips
4. Line #8. step
5. Line #9. lips

Verse 2:
6. Line #3. jump
7. Line #5. passing
8. Line #6. proud
9. Line #10. palm
10. Line #13. phenomenally
11. Line #14. phenomenal

Words containing the /p/ sound:

Pictures Taken from Google Images
Divide the class into two groups, A and B. Paste on the board four posters containing each of them a part of a tongue twister. Then, ask each member of the group to stand up in front of the board facing a poster. Each student reads the part of the tongue twister that is in the poster he/she is facing. Once each student has read his/her part, they move to the right switching positions in order to read a different part of the tongue twister. The learners continue changing places until all of them have read the tongue twister completely. While group A plays, group B monitors their classmates' performance.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /b/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /b/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /b/ sound occurs.

Have students know the voicing, manner and place of articulation of the sound /b/. Tell students this sound is called voiced bilabial stop.

Have students know the vocabulary in all the activities!
**Betty Botter bought a bit of butter.**

"But," said she, "this butter's bitter.

If I put it in my batter, it will make my batter bitter.

But a bit of better butter
That would make my batter better."
So Betty Botter bought a bit of better butter
(Better than her bitter butter)

And she put it in her bitter batter
And made her bitter batter a bit better.
Have students know the voicing, manner and place of articulation of the sound /t/. Tell students this sound is called voiceless alveolar stop.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /t/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /t/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /t/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Invite students to know the rules for the pronunciation of the past tense of regular verbs ending in a voiceless sound. Pronounce the verbs in the present form and then in the past tense form for learners to mirror the pronunciation and notice the difference between forms. Next, have students practice the sentences.
Arrange the classroom so that there is enough space for students to move around. Set eight lines on the floor and asks each student to stand up in one of the starting points of the rows. Blindfold students. Then, start the game by reading a story containing words with the sound /t/. When each learner listens to a word with that specific sound, he/she moves forward. The student who arrives first to the goal is the winner.

**Words with /t/**

The Roar of Freedom

time tiger teeth secret deepest heart wanted

to hopped supposed sweetest toughest not

passed but kept it matter felt went met

trusting resentment walked

**Total of words: 24**

**Note:** Some words such as “tiger,” “but,” and the preposition “to” are repeated. You may ask students to walk just the first time they listen to each of the words.
Session 4: /d/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /d/. Tell students this sound is called voiced alveolar stop.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /d/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /d/ sound occurs.

Let's Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /d/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Trip to the Past

Get students know that if they want to use a regular verb in the past tense, and the verb ends in a voiced sound, the pronunciation of the -ed is /d/. Invite the learners to read each of the words written in this section and to analyze the root of the word. Make sure all the learners repeat the words with the /d/ sound. Then, guide the learners reading the sentences containing the -ed.
The class is divided into two groups, A and B. Provide each group with a board game, some chips, and a die. Students take turns to roll the die and move through the squares in the board game. When a student lands on a square, s/he completes the challenge given. The student who reaches the finish square first is the winner.

Make a sentence: The child needs a doctor.

Name a part of the house with the sound /d/: dining room

Order the sentences: Today she put bread on her butter.

Order the sentence: This road is a dead end.

Which d is pronounced as /d/?: dark /dark/

Answers can vary
Instructions: Take turns to throw the coin. Move your counter once if you get the head and twice if you get the tail. Read and complete the challenge you obtain.

SOUND BOARD GAME

Start the fun

Make a sentence:
doctor-Child-needs

Name a part of the house with the sound /d/

Order the sentences:
put-she-bread-Today-butter-on-her-

Bad luck! 😞
Go back to start

Order the sentence:
end-This-road-a-is-dead

Which d is pronounced as /d/?
grandmother-dark-education-handsome

Mention three countries with the sound /d/.

Do you have a dog? When do you feed your pets?

Ask a classmate:
Do you like to dance? How often do you dance?

That's all!!
I'm sorry!
Go back three spaces.
Have students know the voicing, manner and place of articulation of the sound /k/. Tell students this sound is called voiceless velar stop.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /k/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /k/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /k/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Divide the class in two groups, A and B. Paste on the board four posters containing each of them a part of a tongue twister. Then, ask each member of the group to stand up in front of the board facing a poster. Each student reads the part of the tongue twister that is in the poster s/he is facing. Once each student has read his/her part, they move to the right switching positions in order to read a different part of the tongue twister. The learners continue changing places until all of them have read the tongue twister completely. While group A plays, group B monitors their classmates’ performance.
Ken quite likes Kate. Kate doesn't care for Ken.

Ken catches Kate and kisses her quickly.
Kate cries, kicks and screams.

Ken cowers in the corner.

Ken cures Kate with a quick cup of coffee and a cream cake.
Have students know the voicing, manner and place of articulation of the sound /g/. Tell students this sound is called voiced velar stop.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /g/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /g/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /g/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Before the class, paste the challenges in different parts of the class (following the clues). When the lesson starts, divide the class into two groups, A and B. The groups go to the first station and complete the first challenge. Once they have accomplished the task, they read the clue to get to the second station; they complete the challenge, and leave station one (looking for the second one). Once they arrive to the second station, they complete the challenge, read the clue to get to the third station, and leave. Students continue playing until they get to the rally goal. The first group to get to the goal (after completing five challenges) is the winner.
Note: The worksheets needed for the rally are provided in the following pages. Remember to photocopy and cut up the tasks. Then, place them around the classroom. Make sure the learners understand the instructions.
Instructions: As a group go through the five stations completing the challenges. Read the clues in order to know where you should go. The group that finishes first is the winner.

Station #1-Instructions: Read the poem aloud as a group.

The cowboy way

I put on my chaps
Buckle my spurs
My chaps squeeze my lap
And my bull quivers its fur
The gate swings open with a scream
For the 8 seconds I can dream
He gives me four nasty bucks
So far I'm having good luck
The bull goes into a spin all I want to do is win
The buzzer goes buzz
At first I didn't know what it was
I hit the ground

Next challenge is on an object that is hanging on the wall. The teacher uses it to write vocabulary or to write important information. Sometimes she uses red markers to write on it.
Station #2-Instructions: Write down four words with the sound /k/ and four words with the sound /g/.

/k/

/g/

Next challenge is on a table where students place their books, pencilcases and dictionaries.

Station #3-Instructions: Read the sentences. Then, underline the words containing the sound /k/ and circle the words containing the sound /g/.

1. Goats eat green grass.
2. Karol saw a race car when she was going to Canada.
4. Gretel makes castles with sand.
5. The queen was quiet to catch a cat on her kitchen.

Station #4-Instructions: Open one of the envelopes and read the words inside. Then, make a sentence by using the words in the envelope. When you are ready with the first envelope, continue with the second.

Station #5-Instructions: To complete the last task, you need to pretend to go home. On the way, you will find the next challenge.
I broke a glass with milk.

She puts green lipstick on her lips.

She made a joke about an insect in Greece.

The doctors gave examples of the dangers of junk food.

I love to eat hot dogs with a lot of ketchup.
Station #5-Instructions: Read the words and group them into words pronounced with the sound /k/ or /g/. **Four words are not** pronounced with /k/ or /g/.

- Well done. You have finished all the challenges.

Station #1 The learners read the poem *The Cowboy Way* aloud as a group.

Station #2 The students write down four words with the sound /k/ and four words with the sound /g/.

Answers may vary.

Station #3 Students underline the words containing the sound /k/ and circle the words containing the sound /g/.

1. Goats eat green grass.
2. Karol saw a race car when she was going to Canada.
4. Gretel makes castles with sand.
5. The queen was quiet to catch a cat on her kitchen.

Station #4 The learners open one of the envelopes and read the words inside. Then, they make a sentence by using the words in the envelope. When they are ready with the first envelope, they continue with the second.

1. I broke a glass with milk.
2. She puts green lipstick on her lips.
3. She made a joke about an insect in Greece.
4. The doctors gave examples of the dangers of junk food.
5. I love to eat hot dogs with a lot of ketchup.

Session 7: /f/
Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /f/. Tell students this sound is called voiceless labiodental fricative.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /f/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /f/ sound occurs.

Let's Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /f/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Discover

Divide the class in two groups, A and B. Paste on the board four posters containing each of them a part of a tongue twister. Then, ask each member of the group to stand up in front of the board facing a poster. Each student reads the part of the tongue twister that is in the poster s/he is facing. Once each student has read his/her part, they move to the right switching positions in order to read a different part of the tongue twister. The learners continue changing places until all of them have read the tongue twister completely. While group A plays, group B monitors their classmates’ performance.

Make sure students know the vocabulary in all the activities!
**The Sound of Poetry**

**Symphony in Yellow**
by Oscar Wilde

**Verse 1:**
12. Line #2. Butterfly

**Verse 2:**
13. Line #5. full
14. Line #6. wharf
15. Line #7. scarf
16. Line #8. fog

**Verse 3:**
17. Line #9. fade
18. Line #10. flutter
19. Line #10. from
20. Line #11. feet

Words containing the /f/ sound:
Have students know the voicing, manner and place of articulation of the sound /v/. Tell students this sound is called voiced labiodental fricative.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /v/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /v/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /v/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Divide the class in two groups, A and B. Paste on the board four posters containing each of them a part of a tongue twister. Then, ask each member of the group to stand up in front of the board facing a poster. Each student reads the part of the tongue twister that is in the poster s/he is facing. Once each student has read his/her part, they move to the right switching positions in order to read a different part of the tongue twister. The learners continue changing places until all of them have read the tongue twister completely. While group A plays, group B monitors their classmates' performance.
Veggie met Vet on vacations.

Veggie visited Venice,
and _Vet_ a _Viking village_.

_Vet_ loved it, so _Veggie_ made a _video_ of it.
Have students know the voicing, manner and place of articulation of the sound /θ/. Tell students this sound is called voiceless dental fricative.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /θ/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /θ/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /θ/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Divide the class in two groups, A and B. Paste on the board four posters containing each of them a part of a tongue twister. Then, ask each member of the group to stand up in front of the board facing a poster. Each student reads the part of the tongue twister that is in the poster s/he is facing. **Note:** Some words such as “thought” and “Smith” are repeated. You may ask students to walk just the first time they listen to each of the words.
Session 10: /ð/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /ð/. Tell students this sound is called voiced dental fricative.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /ð/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /ð/ sound occurs.

Let's Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /ð/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Discover

The class is divided into two groups, A and B. Provide each group with a board game, some chips, the cards and a die. Students take turns to roll the die and move through the squares in the board game. When a student lands on a square, s/he looks for the card containing the word in the board game. S/he pronounces the word and tells his/her classmates if the th is /θ, ð/. The student who reaches the finish square first is the winner, and the second winner is the person who has obtained more words with the voiced th.

Make sure students know the vocabulary in all the activities!
1. Those computers are expensive.
2. The newspaper has the weather forecast.
3. Valery has made a worthy effort to improve.
4. Peacocks have colorful feathers.
5. If you do not water plants, they will wither.
6. Fruits are healthier than fast food.
7. They are my friends.
8. Joshua will come back within an hour.
9. We missed the bus. Therefore, we must call a taxi.
10. The table has a smooth surface.
11. There are some frogs in the garage.
12. I will sunbathe on the beach next weekend.
13. The movie was seen by millions of people.
14. I seethe when people ignore me.
15. Your father travels around the world.
Instructions: Take turns to roll a die. When you land on a square, look for the card containing the word you land on. Read the card and say if the th is /θ, ð/. The winner is the one that reaches the end square first. The second winner is the person who has obtained more words with the voiced th.
Those computers are expensive.

Peacocks have colorful feathers.

The newspaper has the weather forecast.

Valery has made a worthy effort to improve.

Fruits are healthier than fast food.

If you do not water plants, they will wither.

Note: The cards needed are provided in these pages. Remember to photocopy and cut them up.
They are my friends.

Joshua will come back within an hour.

We missed the bus. Therefore, we must call a taxi.

There are some frogs in the garage.

I will sunbathe on the beach next weekend.

The table has a smooth surface.

Your father travels around the world.

I see the when people ignore me.

The movie was seen by millions of people.
Session 11: /s/

Have students know the voicing, manner and place of articulation of the sound /s/. Tell students this sound is called voiceless alveolar fricative.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /s/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /s/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /s/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Invite students to know the rules for the pronunciation of -s in third person singular, plural nouns, possessives, and contractions with voiceless sounds. Explain such rules and pronounce the words for learners to mirror the pronunciation and practice.

Make sure students know the vocabulary in all the activities!
Read the poem to students. Ask them to circle the words containing the sound /s/. Afterwards, encourage learners to read the poem individually. You may ask students to work in pairs and take turns reading the poem.

Words containing the /s/ sound:

Messy Room
by Shel Silverstein

Verse 1:

1. Line #1. this
2. Line #3. overstuffed
3. Line #6. sweater
4. Line #7. scarf
5. Line #7. ski
6. Line #8. pants
7. Line #8. carelessly
8. Line #9. books
9. Line #9. closet
10. Line #10. vest
11. Line #11. asleep
12. Line #12. smelly
13. Line #12. sock
14. Line #12. stuck
15. Line #13. this
16. Line #15. say
17. Line #15. it’s
Session 12: /z/

Have students know the voicing, manner and place of articulation of the sound /z/. Tell students this sound is called voiced alveolar fricative.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /z/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /z/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /z/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Get students know that if they are using a word ending in -s or -es, the pronunciation of the -s or -es could change depending on the root of the word. In this part of the lesson, let the students know that -s is pronounced /z/ when it is preceded by a voiced sound, and it is pronounced /iz/ when the final sound is sibilant. Invite the learners to read each of the rules, and the examples written in this section. Make sure all the learners repeat the words with the /z, iz/ endings. Then, guide the learners reading the sentences containing the -ed ending.

Make sure students know the vocabulary in all the activities!
Before the class, paste the challenges in different parts of the class (following the clues). When the lesson starts, divide the class into two groups, A and B. The groups go to the first station and complete the first challenge. Once they have accomplished the task, they read the clue to get to the second station; they complete the challenge, and leave station one (looking for the second one). Once they arrive to the second station, they complete the challenge, read the clue to get to the third station, and leave. Students continue playing until they get to the rally goal. The first group to get to the goal (after completing five challenges) is the winner.

Note: The worksheets needed for the rally are provided in the following pages. Remember to photocopy and cut up the tasks. Then, place them around the classroom. Make sure the learners understand the instructions.
Instructions: As a group go through the five stations completing the challenges. Read the clues in order to know where you should go. The group that finishes first is the winner.

Station 1 - Go to the place where you can prepare lunch or dinner. You will find your first challenge there.

Station #1-Instructions: Read the poem aloud as a group.

---

On the Grasshopper and the Cricket
By John Keats

The poetry of earth is never dead:
When all the birds are faint with the hot sun,
And hide in cooling trees, a voice will run
From hedge to hedge about the new-mown mead;
That is the Grasshopper’s--he takes the lead
In summer luxury.--he has never done
With his delights; for when tired out with fun
He rests at ease beneath some pleasant weed.
The poetry of earth is ceasing never:
On a lone winter evening, when the frost
Has wrought a silence, from the stove there shrills
The Cricket’s song, in warmth increasing ever,
And seems to one in drowsiness half lost,
The Grasshopper’s among some grassy hills.

---

Station 2 - Next challenge is on an object that is hanging on the wall. The teacher uses it to write vocabulary or to write important information. Sometimes she uses red markers to write on it.
Station #2-Instructions: Write down **three** words with the sound /s/, **three** words with /z/ and **three** with /ɪz/.

Session 13: /ʃ/

Have students know the voicing, manner and place of articulation of the sound /ʃ/. Tell students this sound is called voiceless post-alveolar fricative.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /ʃ/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /ʃ/ sound occurs.

Divide the class in two groups, A and B. Paste on the board four posters containing each of them a part of a tongue twister. Then, ask each member of the group to stand up in front of the board facing a poster. Each student reads the part of the tongue twister that is in the poster s/he is facing. Once each student has read his/her part, they move to the right switching positions in order to read a different part of the tongue twister. The learners continue changing places until all of them have read the tongue twister completely. While group A plays, group B monitors their classmates’ performance.
The posters needed are provided in these pages. Remember to photocopy and cut the posters.

She sells sea shells by the sea shore.

The shells she sells are surely seashells.
So if she sells shells on the seashore,
I'm sure she sells seashore shells.
Session 14: /tʃ/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /tʃ/. Tell students this sound is called voiceless post-alveolar fricative.

Let's Activate

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /tʃ/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /tʃ/ sound occurs.

Discover

Have the students standing one next to the other in front of you. Tell them to pay attention to the story you read, and remind them to move one step ahead when they listen to the sound /tʃ/. In the end, the learner who has walked the longest path is the winner.

Discover!!!

This is the story of Bumble’s biggest prayer. In his first night, he didn’t know what position to take to sleep, but he had a good habit, and that’s what he did during the game. In the last minute, he had to go to the bathroom, and he heard his favorites, the learners to listen, allow the far position, and checked the last coming. Perhaps sound was made, and the learner was given the chance to be the first. The story started with the words ‘The learner who got the distance of the path was the winner.’ Then, the learner was given the chance to be the first. The story finished with the words ‘The learner who got the distance of the path was the winner.’
Discover /tʃ/

BLIND STORY

Words with /tʃ/

A Baseball Game
Charles match cheered chest chose watched
touch pitcher children catch Fortunately coach
butcher kitchen mature posture reached
pitcher picture orchard chased porch speech
situation sandwiches cheese

Total of words: 26

Note: Some words such as “pitcher,” “Charles,” “orchard,” and “kitchen” are repeated. You may ask students to walk just the first time they listen to each of the words.
Session 15: /dʒ/  
Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /dʒ/. Tell students this sound is called voiced post-alveolar fricative.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /dʒ/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /dʒ/ sound occurs.

Let’s Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /dʒ/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Discover

The class is divided into two groups, A and B. Provide each group with a board game, some chips, and a die. Students take turns to roll the die and move through the squares in the board game. When a student lands on a square, s/he completes the challenge given. The student who reaches the finish square first is the winner.

Make sure students know the vocabulary in all the activities!
Make a sentence: The orange juice in the fridge.

Name a month that starts with the sound /dʒ/: January, June, or July

Order the sentence: Jane will graduate from Biology in June.

Pronounce the words: Procedure /prəˈsiːdʒər/, gradual /ˈɡrædʒuəl/, individual /ˌɪndɪˈvidʒuəl/, education /ˌedʒuˈkeɪʃən/.

Which g is not pronounced as /dʒ/? Game /geɪm/

Name three names that start with the sound /dʒ/: Answers may vary, for example: Jane, George, July, Jessica, etc.

Two occupations with the sound /dʒ/: Judge, janitor.

What do you wear in the lower part of your body? Jeans

What do you wear when it’s cold? Jacket
Instructions: Take turns to throw the coin. Move your counter once if you get the head and twice if you get the tail. Read and complete the challenge you obtain.

**SOUND BOARD GAME**

**Start the fun!**

**Make a sentence:** fridge-juice-orange

**Name a month that starts with the sound /dʒ/:**

**Order the sentence:** Biology-from-graduate-in-Jane-will-June-

**Bad luck! 😞 Go back to start**

**Pronounce the words:** procedure-gradual-individual-education

**Which g is not pronounced as /dʒ/?**

- gender
- age
- game
- gym
- giant

**Mention three names with the sound /dʒ/:**

**Which are two occupations with the sound /dʒ/?**

**I'm sorry! Go back three spaces.**

**What do you wear in the lower part of your body? What do you wear when it’s cold?**

**That’s all!!**
Have students know the voicing, manner and place of articulation of the sound /ʒ/. Tell students this sound is called voiced post-alveolar fricative.

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /ʒ/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /ʒ/ sound occurs.

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /ʒ/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Before the class, paste the challenges in different parts of the class (following the clues). When the lesson starts, divide the class into two groups, A and B. The groups go to the first station and complete the first challenge. Once they have accomplished the task, they read the clue to get to the second station; they complete the challenge, and leave station one (looking for the second one). Once they arrive to the second station, they complete the challenge, read the clue to get to the third station, and leave. Students continue playing until they get to the rally goal. The first group to get to the goal (after completing five challenges) is the winner.

Make sure students know the vocabulary in all the activities!
Note: The worksheets needed for the rally are provided in the following pages. Remember to photocopy and cut up the tasks. Then, place them around the classroom. Make sure the learners understand the instructions.
Instructions: As a group go through the five stations completing the challenges. Read the clues in order to know where you should go. The group that finishes first is the winner.

Station 1

• Go to the place where you can prepare lunch or dinner. You will find your first challenge there.

Station #1-Instructions: Read the poem aloud as a group.

★ Delusion Angel

Sitting by my window
How will I ever let you go?
With your face that glows
That's covered with highs and lows

Oh! Sleepless nights
Why are you keeping me so tight?
Through this ever night
How can it ever be right?

Day dream delusion
How will I get out from this illusion?
If my only decision
Is to love your vision?

• Next challenge is on an object that is hanging on the wall. The teacher uses it to write vocabulary or to write important information. Sometimes she uses red markers to write on it.
Station #2-Instructions: Write down three words with the sound /ʒ/ and three words with /dʒ/.

/ʒ/  /dʒ/

_______  ______

_______  ______

Next challenge is on a table where students place their books, pencilcases and dictionaries.

Station #3-Instructions: Read the sentences. Then, underline the words containing the sound /ʒ/ and circle the words containing the sound /dʒ/.

1. I believed he was joking about his lesion.
2. During their leisure time, they cut the hedges around the jail.
3. In the explosion, I was saved by an angel.
4. John had to check the system due to espionage.
5. Translators changed the old version of the Bible into a new version.

The video beam and the tape recorder are stored in this area. You will find next challenge pasted near the door.

Station #4-Instructions: Open one of the envelopes and read the words inside. Then, make a sentence by using the words in the envelope. When you are ready with the first envelope, continue with the second.

To complete the last task, you need to pretend to go home. On the way, you will find the next challenge.
They run when they saw the mirage, but it disappeared.

In conclusion, the president must find a solution to reduce poverty.

We are looking forward to the excursion in December.

According to the map, the treasure is inside an old trunk.

A bus driver said that the collision was caused by a drunk driver.
Station #5-Instructions: Read the words and group them into words pronounced with the sound /ʒ/ or /dʒ/. Three words are not pronounced with /ʒ/, or /dʒ/.

- Well done. You have finished all the challenges.
Instructions: As a group go through the five stations answering the challenges. Read the clues in order to know where you should go. The group that finishes first is the winner.

Station #1-Instructions: Read the poem aloud as a group.

🌟 Delusion Angel

Sitting by my window  
How will I ever let you go?  
With your face that glows  
That's covered with highs and lows  

Oh! Sleepless nights  
Why are you keeping me so tight?  
Through this ever night  
How can it ever be right?

Day dream delusion  
How will I get out from this illusion?  
If my only decision  
Is to love your vision?

Station #2-Instructions: The video beam and the tape recorder are stored in this area. You will find next challenge pasted near the door.
Station #2-Instructions: Write down three words with the sound /ʒ/ and three words with /dʒ/.

<table>
<thead>
<tr>
<th>/ʒ/</th>

Words with different sounds: picture- permission-
Session 17: /m/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /m/. Tell students this sound is called voiced bilabial nasal.

Anchorman

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /m/ sound occurs.

Let’s Activate

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /m/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Discover

Read the poem to students. Ask them to circle the words containing the sound /m/. Afterwards, encourage learners to read the poem individually. You may ask students to work in pairs and take turns reading the poem.

Make sure students know the vocabulary in all the activities!
Do not Stand by my Grave and Weep
by Mary Elizabeth Frye

Verse 1:

1. Line #1. my
2. Line #2. am
3. Line #3. am
4. Line #4. am
5. Line #4. diamond
6. Line #5. am
7. Line #6. am
8. Line #7. morning’s

Verse 2:

9. Line #9. am
10. Line #11. am
11. Line #12. my
12. Line #13. am

Words containing the /m/ sound:

Pictures Taken from Google Images
Session 18: /n/
Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /n/. Tell students this sound is called voiced alveolar nasal.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /n/ sound occurs.

Let's Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /n/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Discover

Divide the class in two groups, A and B. Paste on the board four posters containing each of them a part of a tongue twister. Then, ask each member of the group to stand up in front of the board facing a poster. Each student reads the part of the tongue twister that is in the poster s/he is facing. Once each student has read his/her part, they move to the right switching positions in order to read a different part of the tongue twister. The learners continue changing places until all of them have read the tongue twister completely. While group A plays, group B monitors their classmates’ performance.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /n/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Make sure students know the vocabulary in all the activities!
Ned Nott was shot and Sam Shott was not. So it is better to be Shott than Nott. Some say Nott was not shot. But Shott says he shot Nott. Either the shot Shott shot at Nott was not shot, or Nott was shot.
If the shot Shott shot shot Nott, Nott was shot. But if the shot Shott shot shot Shott, then Shott was shot, not Nott. However, the shot Shott shot shot not Shott -- but Nott.
Session 19: /ŋ/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /ŋ/. Tell students this sound is called voiced velar nasal.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /ŋ/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /ŋ/ sound occurs.

Let's Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /ŋ/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Discover

Arrange the classroom so that there is enough space for students to move around. Set eight lines on the floor and asks each student to stand up in one of the starting points of the rows. Blindfold students. Then, start the game by reading a story containing words with a specific sound. When each learner listens to a word with the /ŋ/ sound, s/he moves forward. The student who arrives first to the goal is the winner.

Make sure students know the vocabulary in all the activities!
Words with /m, n, η/

Dancing in a Shining Morning

Sammy in swing singing mom sang going and
Manny enthusiastically listened Manny no one
an angel song make Sammy invited him
dancing shining morning hugging glowing sun
hearing warning mother calling son sang song
playing flying newborn opened wing

Total of words: 39
Session 20: /j/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /j/. Tell students this sound is called voiced palatal glide.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /j/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Let's Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /j/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

The class is divided into two groups, A and B. Provide each group with a board game, some chips, and a die. Students take turns to roll the die and move through the squares in the board game. When a student lands on a square, s/he completes the challenge given. The student who reaches the finish square first is the winner.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /j/ sound occurs.

Discover

26. Line #11. trembled
27. Line #11. strings
Session 23: /l/

Untie your Tongue

Have students know the voicing, manner and place of articulation of the sound /l/. Tell students this sound is called voiced alveolar liquid.

Dancing Tongue

Play the program Speech Solutions (taken from www.englishlearning.com) and have students watch how to produce the /l/ sound. Show them how to do it step by step. Then, invite learners to repeat the isolated words provided in the video.

Anchor

Have learners take a look at the most common spelling patterns, and encourage them to repeat the words. Explain to them that the spelling pattern is a key element to know when the /l/ sound occurs.

Let's Activate

Have students watch the pictures and pronounce their corresponding names. Make sure they utter the /l/ sound correctly. Then, read the sentences and motivate students to repeat after you. Have students repeat as many times as needed.

Discover

Before the class, paste the challenges in different parts of the class (following the clues). When the lesson starts, divide the class into two groups, A and B. The groups go to the first station and complete the first challenge. Once they have accomplished the task, they read the clue to get to the second station; they complete the challenge, and leave station one (looking for the second one). Once they arrive to the second station, they complete the challenge, read the clue to get to the third station, and leave. Students continue playing until they get to the rally goal. The first group to get to the goal (after completing five challenges) is the winner.

Make sure students know the vocabulary in all the activities!
Note: The worksheets needed for the rally are provided in the following pages. Remember to photocopy and cut up the tasks. Then, place them around the classroom. Make sure the learners understand the instructions.
Instructions: As a group go through the five stations answering the challenges. Read the clues in order to know where you should go. The group that finishes first is the winner.

Station #1-Instructions: Read the poem aloud as a group.

**Poem: Carpe Diem by Robert Frost**

Age saw two quiet children
Go loving by at twilight,
He knew not whether homeward,
Or outward from the village,
Or (chimes were ringing) churchward,
He waited, (they were strangers)
Till they were out of hearing
To bid them both be happy.
‘Be happy, happy, happy,
And seize the day of pleasure.’
The age-long theme is Age’s.
‘Twas Age imposed on poems
Their gather-roses burden

To warn against the danger
That overtaken lovers
From being overflooded
With happiness should have it.
And yet not know they have it.
But bid life seize the present?
It lives less in the present
Than in the future always,
And less in both together
Than in the past. The present
Is too much for the senses,
Too crowding, too confusing-
Too present to imagine.

• Next challenge is on an object that is hanging on the wall. The teacher uses it to write vocabulary or to write important information. Sometimes she uses red markers to write on it.

Subsequently, the designers have made the effort to trace the owner of copyright material, but any involuntary omission will be corrected at the earliest chance.
Instrumento # 1: Cuestionario para la población meta

El siguiente cuestionario forma parte de una investigación sobre el aprendizaje de la pronunciación en los cursos de inglés del programa de Gerontología de la Universidad Estatal a Distancia (UNED). El objetivo principal de este instrumento es conocer las principales necesidades de la población meta en relación con la pronunciación de consonantes en la lengua extranjera. La información que se solicita es confidencial y para uso exclusivo de dicha investigación. Gracias por su ayuda.

**Instrucciones:** Lea y responda las siguientes preguntas de acuerdo a lo que se le solicita escribiendo (✓) dentro de la casilla que seleccione.

**I Parte: Información personal**

Sexo:  
- Masculino  
- Femenino

Edad:  
- 55 – 60  
- 61 – 66  
- 67 – 72  
- 73 o más años de edad

Nivel de escolaridad:  
- Primaria:  
- Secundaria:  
- Educación superior:

Clase social:  
- Alta:  
- Media:  
- Baja:

Profesión:  
______________________________

**II Parte: Preguntas**

1. ¿Qué lo motivó a estudiar inglés como lengua extranjera? Enumere del 1 al 3 en orden de importancia, siendo 1 el de mayor valor y 3 el de menor valor.
   
   Meta personal
   Pasatiempo o recreación
   Viajes fuera del país (turismo)
   Crecimiento profesional

2. ¿Antes de ingresar a los cursos de inglés del Programa de Gerontología, había cursado usted algún módulo de inglés en otro lugar, llámese colegio, universidad, o instituto público o privado?
   
   Sí  
   No

   Si su respuesta es afirmativa indíque el lugar.
   __________________________________________

3. De las tres sub-habilidades (pronunciación, gramática y vocabulario), ¿cuál considera usted primordial para una comunicación efectiva en la lengua extranjera? Enumere del 1 al 3 en orden de importancia, siendo 1 el de mayor valor y 3 el de menor valor.
   
   Pronunciación  
   Gramática  
   Vocabulario
4. ¿Considera usted que la pronunciación es un elemento primordial en el aprendizaje de una lengua extranjera?  
Totalmente de acuerdo □ de acuerdo □ desacuerdo □ totalmente desacuerdo □  
¿Por qué? ____________________________________________________________

5. ¿Cree usted que el no pronunciar de manera correcta las palabras en el idioma extranjero pueda intervenir y dificultar la comunicación?  
Totalmente de acuerdo □ de acuerdo □ desacuerdo □ totalmente desacuerdo □  
¿Por qué? ____________________________________________________________

6. ¿Considera usted que es importante incorporar pronunciación en el programa del curso de inglés para personas adultas mayores?  
Totalmente de acuerdo □ de acuerdo □ desacuerdo □ totalmente desacuerdo □  
¿Por qué? ____________________________________________________________

7. ¿Cree usted conveniente estudiar los sonidos y símbolos de la lengua extranjera en clase?  
Totalmente de acuerdo □ de acuerdo □ desacuerdo □ totalmente desacuerdo □

8. ¿Tiene usted dificultades con la pronunciación de palabras durante la clase de inglés?  
Totalmente de acuerdo □ de acuerdo □ desacuerdo □ totalmente desacuerdo □

9. ¿Se siente usted motivado cuando puede pronunciar las palabras del inglés apropiadamente?  
Totalmente de acuerdo □ de acuerdo □ desacuerdo □ totalmente desacuerdo □

10. ¿Le gusta a usted conocer la pronunciación correcta de las palabras?  
Totalmente de acuerdo □ de acuerdo □ desacuerdo □ totalmente desacuerdo □

11. ¿Qué tipo de actividades le gustaría que se desarrollaran en clase para aprender pronunciación? Marque con (✓) la(s) de su preferencia (puede marcar una o varias opciones).  
Trabalenguas □  
Poemas □  
Juegos con desafíos (resolución de problemas) □  
Juegos de mesa □  
Historias pequeñas □  
Canciones □

Design by Brenes, 2014
Instrument # 2: Pre-test to Assess the Comprehensibility of Students’ English Consonant Pronunciation

DURING THE ADMINISTRATION OF THE PRE-TEST

The following instrument is part of the investigation project that will be developed in the English courses for senior citizens provided by the Universidad Estatal a Distancia (UNED) through the Gerontology program. The aim of this pre-test is to collect data about the comprehensibility of students’ English consonant pronunciation. The information garnered is confidential and for academic purposes only.

Student’s name: ________________________________

Part I. Isolated Words

Instructions: Show the students the different cards which contain isolated words about jobs. While showing the pictures one by one, ask each student to pronounce the word. Remember to record the learner for further revision.

</tbody>
</table>

Instructions to evaluate students’ responses:

Listen to each of the recordings and assess the student’s performance. Tick ☑ each sound when pronounced correctly. Write an X if the student mispronounces the sound.
Part II. Words in Context

Instructions to administer the instrument:

Before administering this instrument, cut each of the cards and laminate them. Show the cards containing the sentences to the learners and ask them to read them aloud. Remember to record the students while they are reading the sentences. You can write any comments in the space provided on this page for notes.

Instructions to evaluate students’ responses:

Listen to each of the recordings and assess the student’s performance. Tick each sound when pronounced correctly. Write an X if the student mispronounces the sound.

These are the sentences that students are going to be shown:
