

Event-Time Analysis of Reproductive Traits in Dairy Heifers

B. Vargas, M. Baaijen, T. van der Lende, and J.A.M van Arendonk

Escuela de Medicina Veterinaria

Universidad Nacional, Costa Rica

Costa Rica

WHY?

1. Allows the use of reproductive data from cows which have only partial information on a specific trait
2. The outcome variable corresponds to the measure of time elapsed from some starting point until an awaited event occurs
3. The results obtained from this analysis are given in the form of time specific probabilities
4. Time dependent covariates can also be added to the analysis.

OBJECTIVES

- 1. Assess the effect of heifer-weight category on age at first calving.**

- 2. Assess the effect of heifer-weight and heifer-milk yield category on days open after first calving.**

COX MODEL

$$\lambda(t;x) = \lambda_0(t) e^{(x' \beta)}$$

$\lambda(t;x)$ = Hazard of event for a cow at time t with covariates x

$\lambda_0(t)$ = Baseline hazard function describing the hazard of event for a hypothetical situation when all covariant values are set to zero.

$e^{(x' \beta)}$ = Term specific to individuals with covariates x .

X

HY_i	= fixed effect of herd-year i in which the sample was taken (1 to 222)
YS_j	= fixed effect of year-season j in which the sample was taken (1 to 15)
$BREED_k$	= fixed effect of breed type k ($k= 1$ to 3)
H_WE_l	= fixed effect of herd-weight category l ($l=1$ to 3)
C_WE_m	= fixed effect of heifer-weight category m ($m= 1$ to 4)
H_MY_n	= fixed effect of herd-milk yield category n ($n= 1$ to 2)
C_MY_o	= fixed effect of heifer-milk yield category o ($o= 1$ to 4)

Descriptive statistics of variables under analysis		
	<u>Age at First Calving</u>	<u>Days Open</u>
Records	4631	1992
Right censored records (%)	1087 (23.5)	183 (9.2)
Minimum censoring time (d)	781	19
Maximum censoring time (d)	1150	610
Average Censoring time (d)	846.1	183.5
No. uncensored records	3544	1809
Minimum failure time (d)	541	22
Maximum failure time (d)	1751	338
Average failure time (d)	843.7	109.8

Conclusions

1. There is a significant effect of BW 390-d on Age at First Calving. Heavier heifers calve earlier and have a higher chance of calving.
2. BW 390-d does not have a large impact on the chance of conception after first calving.
3. Cow milk yield does not have a large detrimental effect on the chance of conception after first calving.
